## **AGRADECIMIENTO**

Quiero agradecer principalmente a mi facultad de ciencias económicas y administrativas de la Universidad Católica Santiago de Guayaquil por la más cálida acogida durante mi carrera con mis profesores la cual me han brindado su apoyo, y afecto la cual es muy comfortable.

Quiero expresar mi agradecimiento a con mis padres y abuelos por ser un pilar para mantener la firmeza y forjar mi carrera, a mis abuelos por apoyarme y dar posible este momento, a mi hermana, por ser mis guías para culminar esta última etapa.

Por último, mi más sincero agradecimiento a mi tutor Econ. Marlon Pacheco Bruque por su constante y activa perseverancia a con nosotros en el desarrollo de la investigación su aporte ayudo a crecer en lo personal y profesional.

**Jorge Josue Peñaloza Muñoz**

## **DEDICATORIA**

A Dios principalmente por permitirme llegar a esta etapa de cumplir una más de mis metas por mantenerme con buena salud.

A mi Papa por apoyarme a lo largo de mi carrera Universitaria y su deseo de culminar junto también con mis abuelos y abuelitas por su más materno amor y sincero apoyo a con mi persona de lograr verme culminar esta etapa.

A mi Mama por brindarme valores y consejos esa perseverancia de seguir y no rendirme ese apoyo incondicional de lucha y sacrificio por recordarme siempre que todo es con sacrificio.

A mi hermana Doménica por siempre estar y compartir momentos juntos ese pilar que todo hermano necesita.

**Jorge Josue Peñaloza Muñoz**

## **AGRADECIMIENTO**

Al finalizar mi etapa universitaria me siento enormemente agradecida con la Facultad Económica y Administrativa de la Universidad Católica de Santiago de Guayaquil, también con mis profesores que han sido una guía para formarme académicamente a través de todos los conocimientos que me han impartido.

Por otro lado, agradezco a Dios a mis padres y a mi hermano quienes han sido mi pilar fundamental en este trayecto importante de mi carrera universitaria, su apoyo incondicional me hizo nunca desfallecer ante cualquier adversidad. También quería agradecer a mi Tutor, el Economista Marlon Pacheco por su paciencia y por ser esa guía incondicional para llevar a cabo nuestro trabajo de titulación.

**Ruth Stefany Rodas Chiquito**

## **DEDICATORIA**

Con todo el amor y respeto que le tengo a Dios y a mi familia, les dedico a ellos mi gran esfuerzo que he puesto en este trabajo de titulación. Me siento agradecida con mi mamá Edita Chiquito quien siempre ha estado pendiente de mí, me ha acompañado en mis noches de desvelo alentándome con palabras de afecto y cariño.

A mi hermano Erick Rodas por su paciencia de esperarme cada noche que llegaba tarde después de salir de clase. También quiero agradecer a mi padre Juan Rodas quien, a pesar de estar en el extranjero, ha sido mi apoyo, inculcándome que debo de esforzarme cada día para lograr uno de mis sueños anhelados.

**Ruth Stefany Rodas Chiquito**

## RESUMEN

El objetivo principal de este trabajo es determinar si la firma del acuerdo multipartes de Ecuador con la Unión Europea, permitió un incremento en el flujo comercial entre ambos actores en el año 2006 - 2019. Considerando una muestra de 48 países con datos trimestrales, utilizaremos un modelo de datos de panel con sus efectos desde las teorías del modelo gravitacional para obtener estimaciones eficientes y precisas. Los resultados mostrarán la importancia de los factores económicos, comerciales y geográficos dados las variables independientes como el PIB de Ecuador y PIB de los demás países, la distancia, la superficie, el idioma y los tratados comerciales internacionales, en los flujos del comercio de Ecuador. Los resultados indican cual es la correlación que existe entre las variables, si se sujeta más al modelo de efectos agrupados, efectos fijos o efectos aleatorios. Por tal razón utilizamos Rstudio para tener un análisis más amplio acerca de nuestras variables escogidas.

***Palabras Claves: Comercio Internacional, Globalización, modelo de gravedad, teoría de la gravedad, tratados comerciales, exportaciones***

## **ABSTRACT**

The main objective of this work is to determine if the signing of Ecuador's multiparty agreement with the European Union allowed an increase in the commercial flow between both actors in the year 2006 - 2019. Considering a sample of 48 countries with quarterly data, we will use a panel data model with its effects from gravitational model theories to obtain efficient and accurate estimates. The results will show the importance of the economic, commercial and geographical factors given the independent variables such as the GDP of Ecuador and the GDP of the other countries, the distance, the surface, the language and the trade agreements, in the trade flows with Ecuador. The results indicate what is the correlation that exists between the variables, if it is more subject to the pooled effects model, fixed effects or random effects. For this reason we use Rstudio to have a broader analysis about our chosen variables.

*Keywords: International Trade, Globalization, gravity model, theory of gravity, trade agreements, exports.*

## INTRODUCCIÓN

La globalización ha tenido un cambio constante en el tiempo, por lo tanto, ha liberalizado la economía global con acuerdos comerciales internacionales permitiendo el intercambio de bienes y servicios, de esta manera se extienden fronteras de apertura al crecimiento y desarrollo para aprovechar las ventajas comparativas que tiene cada país.

En el presente trabajo de investigación trataremos el análisis del acuerdo multipartes con la Unión Europea a través del modelo gravitacional para el Ecuador 2006 – 2019, la cual se define como una firma de acuerdos que influye en el desarrollo económico del Ecuador. A través del modelo gravitacional desarrollaremos el modelo econométrico de datos de panel con cada uno de sus efectos, en la cual se espera obtener resultados significativos.

La problemática de este análisis es verificar el impacto de las variables independientes escogidas para determinar el flujo comercial de nuestro país a través de las exportaciones. En este proyecto de tesis utilizamos Rstudio para correr el modelo en datos de panel, realizando los 3 modelos; efectos agrupados, efectos fijos y efectos aleatorios.

En los resultados de datos de panel se obtuvieron respuestas significativas para el modelo de efectos agrupados, puesto que las variables dependientes e independientes tienen correlación entre sí, demostrando también que el p-value global es significativo e indicando que es un buen modelo.

# Capítulo I

## 1.1. Planteamiento del Problema

Al ser la globalización una puerta que ayuda a liberalizar la economía y a establecer acuerdos comerciales, se iniciaron varias negociaciones que se convirtieron en sucesos productivos tanto políticos, económicos, tecnológicos, sociales y culturales que afectan directamente las condiciones de vida, tanto materiales como culturales de un país. Con este paradigma de la globalización se han permitido intercambios comerciales de bienes y servicios entre los diferentes países del mundo.

En efecto, con la globalización surge el comercio internacional del cual se da apertura al crecimiento y desarrollo económico para que haya una conveniente repartición de capital en factores productivos, aprovechando de esta manera las ventajas comparativas que tiene cada país. Sin embargo, la globalización también tiene desventajas, puesto que algunos países son proveedores de materia prima y otros países se han especializado para ser industrializados y así convertir la materia prima en un producto final.

Luego de abrirse el paso a la globalización, en el año 1950 según Perfecto (2013) aparece la Unión Europea del cual emerge una Declaración franco-alemana de carbón y acero bajo una alta autoridad común, creando a su vez una organización abierta para la participación de los demás países de Europa.

En el 2007 la Unión Europea instauró nuevas tácticas de ayuda para el comercio, siendo esta una propuesta inicial de la Organización Mundial del Comercio, pues aquellos países en vías de desarrollo al sistema de comercio internacional obtendrán beneficios de aperturas económicas.

Las negociaciones de aspecto comercial entre la Unión Europea con los países andinos se dieron en la IV cumbre de América Latina, estas relaciones promovieron a la formación de bloques tales

como la Comunidad Andina de Naciones (CAN) conformada por Colombia, Perú, Bolivia, Chile y Ecuador en el año 2007. Sin embargo, no tuvo éxito, puesto que las orientaciones de cada país no fueron las mismas.

Después de no darse el pacto, Ecuador se demoró casi 10 años en firmar el Acuerdo Comercial Multipartes suscribiéndose en el 2016 para entrar en vigor en el año 2017 y de esta forma, Ecuador pasaría a convertirse en el socio comercial de los 28 países que integran la Unión Europea.

Actualmente, la Unión Europea es uno de los aliados importantes que tiene Ecuador pues los negocios comerciales están alineados a las exportaciones no petroleras, así de esta manera se convierte en un mercado fundamental para los productos de las Micro, Pequeñas y Medianas Empresas (MIPYMES), y de los Actores de la Economía Popular y Solidaria (AEPYS); se puede decir que estos sectores se verán beneficiados por la estabilidad del Acuerdo Comercial.

Según Mesías (2019), “la UE es un mercado con más de 500 millones de consumidores, que se caracteriza por su alto poder adquisitivo y por exigir productos de calidad con responsabilidad social” (p.5). Este acuerdo ha permitido que el Ecuador incremente sus ingresos en el flujo comercial, puesto que, se facilitó según Coral (2019), la desgravación arancelaria del 99,7% de los productos agrícolas que son exportados tradicionalmente a Europa, de igual manera se desgrava el 100% de los productos relacionados con la industria ecuatoriana. Los productos llegan en buen estado al país de destino, entre los cuales se destacan: las rosas, melones, uvilla, guabas, maracuyá, papaya, pitahaya, piñas, mango, frutas congeladas, café, cacao, atún, camarón, textiles, maderas y manufacturas plásticas (p. 52).

Dado que ha transcurrido poco tiempo desde la firma del acuerdo multipartes entre Ecuador y la Unión Europea, el único estudio que se ha realizado para evaluar si el acuerdo refleja incrementos de flujo comercial para Ecuador ha sido el trabajo de los autores Emanuel Yaselga e Ilich Aguirre en el año 2018 con su documento llamado Modelo Gravitacional del Comercio internacional para Ecuador 2007- 2017, en dicho estudio dado que el acuerdo multipartes de la

unión europea fue 2016 y corte en el estudio del 2017 se está realizando nuevamente un análisis de estudio de un corte de fecha hasta el 2019 en función de eso hemos planteado el modelo gravitacional utilizando los 28 países conformados por la Unión Europea para así llegar a obtener mejores resultados.

### **Pregunta de investigación**

¿El acuerdo multipartes permitió un incremento del flujo comercial entre Ecuador y la Unión Europea?

## **1.2. Objetivos**

### **Objetivos Generales**

Determinar si la firma del acuerdo multipartes de Ecuador con la Unión Europea, permitió un incremento del flujo comercial entre ambos actores.

### **Objetivos Específicos**

- Describir las principales teorías relacionadas al tratado de libre comercio y evidenciar empíricamente los resultados de la liberación comercial en el mundo.
- Conceptuar las principales teorías del modelo gravitacional para el análisis del acuerdo multipartes de Ecuador con la Unión Europea.
- Describir el modelo de comercio exterior ecuatoriano y su integración con la Unión Europea.
- Evaluar la incidencia de la firma del acuerdo multipartes en el flujo del comercio exterior entre Ecuador y la Unión Europea a través de un modelo gravitacional.
- Recomendaciones para futuros acuerdos comerciales entre Ecuador y otros bloques comerciales.

### **1.3. JUSTIFICACION**

Este trabajo de investigación tiene como propósito determinar si la firma del acuerdo multipartes tiene efecto en el desarrollo económico del país en el sector exportador la cual a través del análisis cuantitativos y cualitativos y diferentes teorías que permita desarrollar el modelo econométrico para cumplir el propósito de la investigación.

Desde el ámbito económico sería un gran efecto de la firma del acuerdo multipares para el desarrollo económico del Ecuador a través del incremento de las exportaciones que se obtendrían de la oferta exportable.

En lo social un incremento de la oferta exportable del Ecuador o del flujo comercial con la unión europea va a permitir a su vez la creación de nuevas plazas de empleos.

Perspectiva intelectual o científica permite evaluar por medio de herramientas en las cuales verificamos si el tratado del acuerdo multipartes tanto las condiciones como cada relación permitirá verificar la obtención de datos y que el aporte investigativo sea beneficioso e importante por lo tanto obtendremos resultados reales siendo un gran aporte para futuros análisis de nivel intelectual.

Profesionalmente contribuirá una vez evaluado el pacto de la firma del acuerdo comercial permitirá determinar con certeza si el acuerdo beneficiara a la economía del país permitiendo certificar si el acuerdo es beneficioso o no a la economía por lo tanto permitirá tener acuerdos comerciales políticos desde el sector público o privado.

### **1.4. Hipótesis**

La firma del acuerdo multipares permitió un incremento importante del flujo comercial de Ecuador a la Unión Europea.

## **Capítulo II**

### **Fundamentos Teóricos**

En este capítulo se realizará un repaso de las principales teorías generales donde se describirán las teorías de la escuela clásicas de Adam Smith y David Ricardo ya que son unas de las teorías más representativas del comercio internacional. Por otro lado, en otra sección también veremos las ventajas absolutas y comparativas donde se discutirá sobre las teorías de factores específicos mercantilistas.

### **Antecedentes**

#### **2.1. Acuerdos Comerciales de la Unión Europea con Ecuador**

Según Villacis (2015, p. 28) el Ecuador es considerado por la Unión Europea como un socio importante en América Latina. Desde 1993 el Acuerdo de Cooperación y en 1996 en la Declaración de Roma, la Unión Europea mantiene relaciones con el Ecuador. A partir del 2003 gracias a la firma del Acuerdo de Diálogo Político y Cooperación esta relación se hace más estrecha y existe un mayor acercamiento y diálogo. En 2009 se da el primer intento de acuerdos comerciales, en el cual son incluidos tanto Colombia como Perú. Debido a que el Ecuador consideró que los resultados de este proceso no favorecían a los intereses económicos del país, las conversaciones se detuvieron.

## **2.2. Desacuerdos del Ministro de Relaciones Exteriores de Ecuador 2010 con la firma del Acuerdo Multipartes**

Según Ruiz (2019, p. 2), el exministro de Relaciones Exteriores del año 2010, Ricardo Patiño, aportó con ciertos criterios cuando viajó a Madrid junto al expresidente Rafael Correa, para la culminación de las negociaciones entre América Latina, el Caribe y la Unión Europea. Dentro de la conversación que hubo entre las autoridades de ambos países, se destaca la opinión del exministro mencionando que “el Ecuador no firmaría jamás un Acuerdo de Libre Comercio con la Unión Europea”, esta acción asombró al país y sobre todos a los exportadores, pues eso implicaba una barrera comercial. Las afirmaciones hechas por el exministro habrían causado malestar y enojo a Europa. Pues anteriormente, en la ciudad Quito, se le hicieron preguntas sobre los acuerdos comerciales con la Unión Europea.

## **2.3. Firma del Acuerdo Multipartes entre Ecuador y la Unión Europea**

Según Heredia (2017, p. 22), luego del fallido acuerdo con la Unión Europea, Ecuador presentó en el año 2013 su interés en volver a reanudar las negociaciones por lo que con miras a la adhesión del Acuerdo Comercial Multipartes. Ese mismo año se realizaron varias consultas técnicas para que estas negociaciones se retomen. Ya en el año 2014 Ecuador tenía la necesidad de tramitar con celeridad las negociaciones, pues el Sistema General de Preferencias Plus (SGP) se encontraba próximo a terminar.

Para Mora (2016), luego de gestionar la negociación, se presentó la Primera ronda de Negociaciones, teniendo como objetivo el estudio de los textos de las propuestas presentadas por Ecuador, esta medida necesitaba ser aprobada para que se pudiera seguir recibiendo las preferencias arancelarias durante el proceso de análisis en el que se encuentra el acuerdo comercial. Para continuar con la estipulación de este convenio se establecieron cuatro rondas de negociaciones, en las cuales se trataron temas específicos divididos a su vez en cinco mesas de negociación, representadas por jefes negociadores. Temas que fueron considerados primordiales a

tratar por parte de Ecuador en busca de brindar protección a sus sectores más susceptibles, los cuales no estaban teniendo la atención requerida. Una vez dadas por finalizadas todas las Rondas de Negociaciones, procedieron a firmar el acta que hace oficial la terminación de las mismas, se llevó a cabo un examen jurídico de los textos, posteriormente se procedió a la traducción con el fin de ser revisado por todos los países miembros del bloque económico (p. 4).

En el acuerdo multipartes Gavilanez y Mata (2016), hace referencia a la firma entre la Unión Europea y Ecuador es para que ambas partes puedan exportar e importar bienes y servicios. El objetivo de este acuerdo no es perjudicar a ninguno de los países sino más bien con este se logra mejorar el desarrollo mutuo mediante la dinamización de la economía. Con este acuerdo se permitirá que los productos tanto de Ecuador y la Unión Europea logren entrar para competir en el mercado sin pagar aranceles, añadiendo que cada país ha expuesto sus lineamientos para sus productos (p. 46).

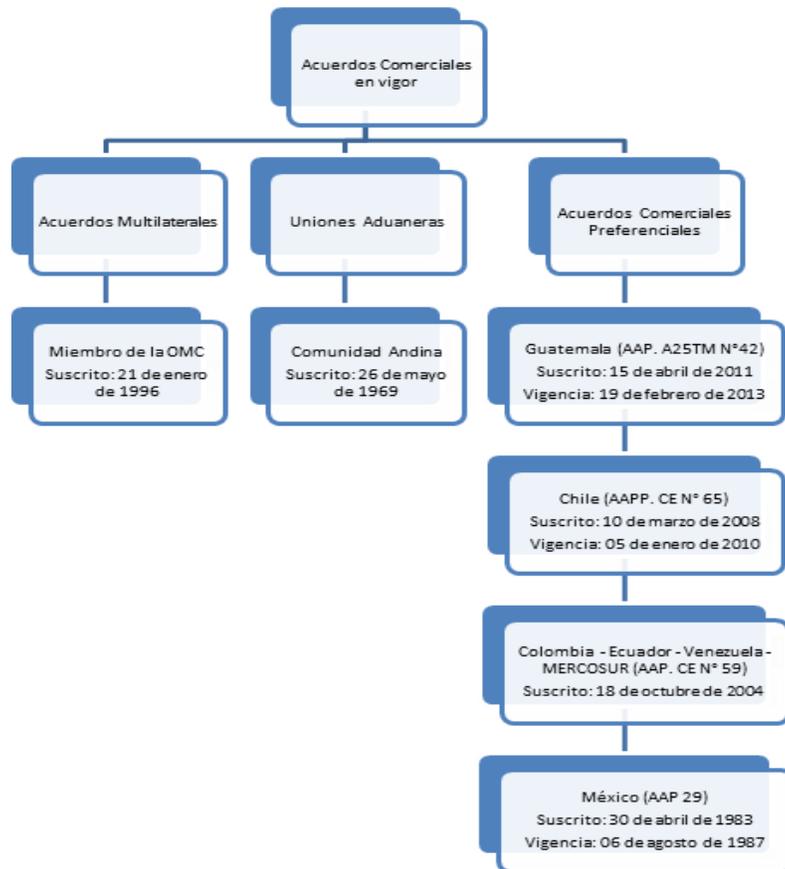

#### **2.4. Acuerdos Comerciales del Ecuador**

Para Gómez, Lazarou, Puccio, y Gulio, (2015), el dialogo entre la comunidad andina (CAN) y la unión europea comenzó en 1996 con Declaración de Roma en la cual se sustituyó en 2003 con el acuerdo de dialogo político y cooperación. Tras este fracaso en 2008 se puso en marcha una nueva negociación multilateral con los países andinos que en las cuales participo Colombia y Perú en el 2012 pero Ecuador y Bolivia no participaron, por la que Ecuador retomo sumarse al acuerdo con la unión europea en el 2014 (p.4).

Con la apertura de la globalización indica Guevara (2015), la cual fue necesario regular las condiciones que estarán sujetas las negociaciones comerciales entre los agentes económicos, por consiguiente, los acuerdos y tratados comerciales actúan como dinamizadores del comercio Internacional e instrumentos de la materia comercial. En los últimos años Ecuador ha suscrito acuerdos comerciales con diferentes países y bloques económicos de manera que el comercio entre las partes involucradas sea previsible, fluido y libre (p. 33).

## 2.5. Acuerdos Vigentes de Ecuador

En la página del Sistema de Información sobre Comercio Exterior encontramos que Ecuador tiene siete acuerdos comerciales que se encuentran suscritos y en vigencia. A continuación, se muestra en el siguiente gráfico dichos acuerdos.

*Figura 1. Acuerdos Comerciales Vigente.*

Tomado de “Información sobre Ecuador”, por Sistema de Información Sobre Comercio Exterior ,2020

([http://www.sice.oas.org/ctyindex/EQU/ECUagreements\\_s.asp](http://www.sice.oas.org/ctyindex/EQU/ECUagreements_s.asp))

## **Marco teórico**

### **2.6. Teorías del Comercio Internacional**

El análisis del comercio internacional según Krugman y Obstfeld (2012, p. 9), pone el acento en las transacciones reales de la economía internacional, es decir, en aquellas transacciones que implican un movimiento físico de bienes o un compromiso tangible de recursos económicos. El análisis financiero internacional pone el acento en el lado monetario de la economía internacional, esto es, en las transacciones financieras como las compras por parte de los extranjeros de dólares estadounidenses. Un ejemplo de un tema de comercio internacional es el conflicto entre Estados Unidos y Europa relativo a las subvenciones europeas a las exportaciones de productos agrícolas; un ejemplo de un tema financiero internacional es la controversia acerca de si el valor del tipo de cambio del dólar debe flotar libremente o debe ser estabilizado por una actuación gubernamental.

### **2.7. Teoría Clásica**

Según el análisis de Yépez (2012) la naturaleza en las naciones cita a Smith (1776) “la naturaleza y causas de la riqueza de las naciones, la cual se ven las corrientes mercantilistas de la época, donde explica que el estado debía invertir en el comercio incentivando las exportaciones y limitando las importaciones” (p.15).

Para Smith es importante la división de trabajo y el proceso de desarrollo dinamizando a la productividad refiriéndose que, al intercambio, es decir la ventaja efectiva de mercancías de mercado, argumenta que el mercado mantiene un volumen de comercio considerable dependiendo de la certidumbre del intercambio, previo al intercambio del desarrollo económico mantiene términos de comercio exterior, alegando que si ambos países comercian entre sí, se proporcionan mutuamente un mercado, concluyendo que extender el desarrollo del mercado de una industria dependerá de la eficiencia de procesos de intercambio, por lo tanto el grado de división social del trabajo se especializa en actividades industriales (Ricoy, 2005, p.34).

Quiere decir que un superávit comercial significa que el déficit comercial del otro lado afecta y beneficia al otro lado.

Para Ibarra (2016), los primeros desarrollos del comercio encontrados por Smith son por medio de la teoría de la ventaja absoluta en la cual nos explica que en ausencia de los costos de transporte genera grandes ganancias en exportaciones de ambos países (p.61).

David Ricardo desarrollo los principios de la política económica y su tributación obra que trascendió al desarrollo del comercio internacional destacando el rendimiento del trabajo como aquella producción que la determina el comercio internacional, por otro lado considera los factores productivos limitados ya que existe un costo de oportunidad del mismo, se crea un modelo a partir de dos países con dos bienes que se producen competencia perfecta de producción en la cual, si en la industria existen diferencias en productividad es de importancia para el desarrollo de la exportación de bienes de una industria en el comercio cuyo costo a relación de bienes de otra industria sea de menor costo relativo del socio comercial, por la cual cada país obtiene una ventaja comparativa al exportar bienes de manera eficiente aumentando la demanda y el nivel de vida de cada país (Yépez, 2012, p.15).

Por tanto, Ricardo perfecciono la teoría y propuso la teoría de la ventaja comparativa que describiremos en el siguiente apartado, pero básicamente la teoría “reconoce que las fuerzas del mercado asignan los recursos del país a áreas con mayor ventaja comparativa productiva”, (Loor, 2016, p.23).

## **2.8. Teoría de Hecksher-Ohlin de la dotación del factor**

Dos economistas suecos como Hecksher-Ohlin ampliaron la teoría de Ricardo y explicaron las diferencias de recursos en el comercio considerando las diferencias como la única fuente en el comercio según Moreno, Narváez, y Sancho (2016) comentan que:

Según Yépez (2012) “si relativamente un país con abundante trabajo llega a aumentar sus exportaciones, entonces se obtendrá un efecto positivo en el empleo, y de forma contraria, si aumenta sus importaciones el país exportará sus servicios factoriales abundantes e importará los escasos” (p.16).

Para Zúñiga (2012 citado en Mesías, 2019) explica que la teoría planteada de los países en la producción de aquellos bienes se especializa antes por lo que requieren una abundante cantidad de factores, por ende, es menos costoso, con lo cual es posible ofrecer al mercado internacional productos con costos más bajos (p.23).

La teoría según Bucheli (2015) comenta que la dotación de factores parte de las teorías clásicas de Smith y Ricardo, se considera un factor productivo en la diferencia que el trabajo incluye el análisis al capital, razón por la cual, el proceso productivo de los diferentes países da lugar a la interpretación de diferentes modelos comerciales (p.19).

## **2.9. Teorema de igualdad de precio del factor**

Según Ramos (2001), el tratado de libre comercio estos precios tienden a ser iguales a los precios de los factores por lo tanto se deben cumplir las condiciones para igualar los precios de los factores esto se refiere a que no existen costos de transporte ni barreras comerciales en la cual el teorema no permite la inversión extranjera, entendiéndose como capital, la transferencia internacional de factores de producción como la mano de obra y la tecnología, por lo que el mercado actual tiene defectos que dificultan la completa igualdad de precios de los factores (p.24).

Define Pimentel (2015), “que el intercambio de factores a través del comercio dio lugar a que los dos países participaran de los factores de producción” (p.42).

## **2.10. Teorema de Stolper-Samuelson**

En este teorema de Stolper-Samuelson (1949, 1967, citado en Ramos, 2001) la igualdad de precio del factor es más costosa que el factor abundante a través del comercio internacional, provocando un saldo positivo para un país haciendo necesaria la implementación, en el mediano o largo plazo, de una política de redistribución de ingresos para evitar que en un segmento de la población incurra en pérdidas de forma reiterada (p.25).

Este teorema según Pucheta (2015, p.2) dice que es un aumento en el precio relativo de las materias primas aumentando las recompensas relativas de ampliarse utilizando la producción de productos y reduciendo otros factores.

## **2.11. Teorema de Rybczynski**

El tercer teorema propuesto por Rybczynski en (1995 citado en Ramos, 2001) describe que calculando a precios constantes la concesión de un factor aumenta en proporción a la producción del producto intensivo en factores y disminuirá la producción de otro factor, esto muestra que, si el stock de capital de un país aumentará, el producto intensivo en capital se expandirá en producción utilizando la oferta de capital extranjero (p.25).

Esto significa que en el comercio mundial el teorema establece que un aumento de dotación de un factor de producción en un determinado país producirá un aumento en la cantidad que se produce de un bien que utiliza dicho factor de forma intensiva y una disminución en la producida del otro bien.

## **2.12. Teoría de la Ventaja Absoluta**

Según Boundi (2014) Existen algunos supuestos que regulan a el mecanismo de relaciones en comercio entre naciones, dentro de las fronteras de un país, movilidad internacional de capitales, movilidad de capital mayor que la movilidad fuerza de trabajo, Balanzas comerciales en desequilibrio no existen mecanismos que las equilibre (p.139).

Para Moreno et, (2016, p.9) esta teoría del BCE tiene dos formas de demostrar que el comercio beneficia a un país primer se puede palpar en el comercio como método de producción indirecto en lugar de producir otra mercancía por sí mismo, un país puede producir otra mercancía e intercambiarla en segundo lugar puede demostrar que el comercio se está expandiendo y existe una posibilidad de consumo en el país lo que es ganancias para del comercio.

Esto quiere decir en otras palabras, la ventaja absoluta nos dice que un país es mejor que otros en la producción de un bien o servicio. Ofrece mayor calidad a un menor coste. Al tener mejores recursos tales como tecnología, tiempo, capital o mejor factor humano, puede producirse algo con más eficiencia. Esto hace que pueda emplearse esta medición a la hora de establecer comparaciones entre distintos productores.

## **2.13. Teoría de ventaja comparativa**

Antes de entrar en teoría de la ventaja comparativa cabe recalcar que son de los modelos de Ricardo, Heschker-Ohlin-Samuelson y Shaikh (1973, 2000,2009 citado por Boundi, 2014, p.143) en la cual define el modelo de Ricardo de la ventaja comparativa que debe transmitir como pasar la ley de competencia dentro de las fronteras de un país a la ley de competencia entre países.

Se considerando la producción de bienes de un país de manera eficiente que son para exportación, sustituyendo la importación tiene la ventaja comparativa en la economía de la producción de un bien comerciable considerando políticas para planificación e inversión (Tsakok, 1990, p.105).

Por otro lado, Arias y Segura (2004), asegura que la ventaja comparativa es uno de los fundamentos básicos del comercio internacional. Asume como decisivos los costes relativos de

producción y no los absolutos. En otras palabras, los países producen bienes que les supone un coste relativo más bajo respecto al resto del mundo. (p.2).

#### **2.14. Teoría Mercantilista**

Para Carbaugh (2009), indica que “abarca más o menos desde 1500 a 1750, donde se dieron amplias transformaciones en la sociedad que va desde la descomposición de las formas medievales de organización social hasta la expansión y la generalización del comercio internacional y de la economía de mercado” (p.29)

El modelo del factor según Jones (1971 citado por Ospina y Riascos, 2015, p.2), reconoció que además del trabajo se agregó la existencia del capital y la tierra como factores de producción lo que aumenta el trabajo como factor producción móvil, pero el capital y la tierra se consideran como factores de producción específico en la cual se distinguen los elementos, es decir, solo se puede utilizar en un sector, por lo que se reconoce la inmovilidad del elemento tierra.

Este modelo se relaciona al absolutismo y el ejercicio por parte de Carbaugh (2009), los estados de una política de poder frente a sus vecinos y de expansión colonial en ultramares podría esperar que, si uno de los dos países abunda en los factores específicos y el otro en los factores genéricos relativamente, la determinación de la ventaja comparativa dependerá del grado de sustituibilidad de los factores específicos por los genéricos (p.79).

Entonces Ospina y Riascos (2015), se refiere que si los primeros son fácilmente sustituibles por los segundos la ventaja comparativa se desplaza hacia los países con abundancia relativa de estos factores respectivamente, así el comercio internacional puede explicarse desde diferencias de oferta relativas un país como abundante tierra, pero poco capital mientras que el segundo país tiene ambos y dependiendo de los tamaños de las economías, podrían modificarse la estructura comercial fuertemente (p.2).

## **2.15. Teoría Neoclásica**

La teoría neoclásica según Benítez (1995), estudia la determinación simultánea de los precios y de las cantidades intercambiables que compatibilizan los planes de los agentes. Para ellos supone que la única información que recibe cada individuo es el sistema de precios, y también que las decisiones tomadas por cada agente representan una fracción muy pequeña del volumen de transacciones en cada mercado por lo cual no afectan a dicho sistema (p. 13).

Por otro lado, Ruiz (2020), indica que la teoría económica neoclásica postula que el libre comercio y la flexibilidad del tipo de cambio son los medios para lograr un balance comercial y un “óptimo de Pareto” en la producción y el consumo en una economía. De acuerdo con el teorema H-O, al participar en el comercio internacional en condiciones de libre mercado, un país optimiza su producción y consumo cuando especializa su economía, de manera natural, en las áreas de producción en las que posee ventajas comparativas que se derivan de su dotación relativa de factores productivos, obteniendo a cambio los bienes que internamente produce con desventajas comparativas (p. 101).

## **Marco Conceptual**

El presente trabajo se concentra en los datos del Producto Interno Bruto (PIB), PIB per cápita, las exportaciones, distancia que mide los kilómetros de puerto a puerto, superficie y el tratado de libre comercio que representan, que serían las bases para una retrospectiva investigación en la que se pueda aportar una referencia exacta. En el ámbito económico es importante recalcar a donde se exportan nuestros productos tradicionales no petroleros que son los principales países que conforman la Unión Europea por lo que se deberá realizar un análisis de los últimos 10 años.

Después de la segunda guerra mundial hubo un gran desarrollo económico las colonias se expandieron, se desarrollaron antes del imperio a través de políticas de ideales de colonialismo y nacionalismo por lo que están probadas en el comercio (Balassa, 1965, p.13).

Ramón Támanes (1990 citado en Petit, 2014, p.140) considera que la integración económica “es un proceso a través del cual dos o más mercados nacionales previamente separados y de dimensiones unitarias estimadas poco adecuadas se unen para formar un solo mercado (mercado común) de una dimensión idónea”.

Donde De la Cruz y Rosales (2019) antes de formar un mercado exportador se necesita de un acuerdo como el acuerdo Multipartes entre Ecuador y la Unión Europea donde es el resultado de una historia de relaciones culturales, económicas y políticas que con el paso de los años fortaleció hasta que Europa se ha convertido en el primer destino en las exportaciones no petroleras del Ecuador (p.43).

### **2.17. Teorías y modelos de la ley de Gravedad**

En esta sección especificaremos las diferentes teorías y los modelos de la ley de la gravedad.

En la teoría de Ley de Gravedad de Newton citado por Strathern (1997) afirma que ley de gravedad actúa entre dos cuerpos demostrando que la fuerza es directamente proporcional al producto de sus dos masas e inversamente proporcional al cuadrado de la distancia que los separa (p.47).

Lo cual es propuesta por Newton remarcada por Strathern es expresada en el siguiente algoritmo:

$$F = \frac{m_1 m_2 G}{d^2} \quad \text{Formula 1}$$

En donde la ecuación explica que:

- F es la fuerza de atracción de la gravedad
- m1 y m2 son las masas de dos cuerpos
- d es la distancia que las separa
- G es la constante de gravitación universal.

Según Strathern en su libro (1999) hace referencia que Newton no ha comprendido de inmediato todo el concepto de gravedad, pero fue esto lo que lo llevo a un largo camino de matemáticas y finalmente su ley de gravedad (p.48).

Para Newton la ley de gravedad se puede refinar como parte del proceso de aproximación gradual (Montes, 2009, p.142).

Donde Cavendish en el libro de Strathern (1999) estipula que para determinar el valor de G un siglo antes se las arregló por la cual:

“Se estipula que la ley de gravitación se aplicaba a todo el universo estos cálculos se basaron en la observación de la luna y de los planetas ya descubiertos, pero Newton no admitió objeción alguna, haciendo la famosa declaración “Hypotheses non fingo” yo no hago hipótesis (p.49)”.

Lo que esto constituyó en uno de los descubrimientos más grandes de todos los tiempos de parte del matemático filósofo del siglo XX por lo que en este trabajo implementaremos la ley de gravedad de Newton para determinar si el acuerdo multipartes con la Unión Europea con Ecuador es efectiva para el desarrollo económico del sector exportador.

## 2.18. Modelo de Gravedad

El modelo se basa en la ley de gravedad de Newton fue definido originalmente por Jan Tinbergen (1962 citado en Albornoz y Tonon, 2020), pues el físico británico Isaac Newton fue quien formulo la ley de gravitación universal, en la que explicó el fenómeno de la gravedad, dijo: “la fuerza es proporcional al producto de las masas, e inversamente proporcional al cuadrado de la masa separadas por la distancia” (p.18).

Es importante según (Pinos, Albornoz, García, & Tanon, 2019) que, mediante la aplicación de un modelo gravitacional, en forma de modelo econométrico en logaritmo, se puede llegar a determinar la elasticidad de los flujos comerciales bilaterales, ocasionada por cambios en las variables explicativas (p.5).

Krugman y Obstfeld (2012), lo llaman modelo de gravedad del comercio mundial ya que la razón del nombre es una analogía con la ley de gravedad de Newton, así como la gravedad universal entre dos objetos cualesquiera se suma con su masa a medida que aumenta la distancia, el comercio entre dos países se mantiene sin cambios permaneciendo iguales, proporcionalmente al producto interno bruto y disminuyen con la distancia. Por la cual los economistas suelen estimar el modelo de gravedad general que utiliza la siguiente formula:

$$T_{ij} = A x Y_i^a x Y_j^b / D_{ij}^c \quad \text{Formula 2}$$

- A es una constante.
- T valor del comercio entre el país i y el país j.
- Y es el PIB del país i, es el país j.
- D es la distancia entre dos países.

Por lo que quiere decir valor del comercio entre dos países tales que son proporcional siendo todo igual al PIB de los dos países y disminuye con la distancia de ambos, la ecuación también afirma que las tres cosas que determinan el volumen de comercio entre países son el tamaño de los

PIB de ambos países y la distancia entre ambos (p.15).

En la cual Krugman (2012) y Rauch (2016) citado en Albornoz y Tonon (2020), establece que se utilizaría en el modelo de gravedad de Tinbergen la siguiente ecuación:

$$Y_{ij} = A \frac{PIB_i PIB_j}{D_{ij}} \quad \text{Formula 3}$$

Donde:

- $Y_{ij}$  es la variable dependiente y representa flujo comercial entre los dos países  $i$  y  $j$ .
- $PIB_i$  y  $PIB_j$  son las variables independientes ya que representan al producto interno bruto del país  $i$  y del país  $j$ .
- $D_{ij}$  representa la distancia que existe entre los dos países  $i$  y  $j$
- $A$  es la constante del comercio.

La fórmula establece una relación en el flujo comercial de dos países utilizando las variables PIB, Distancia y  $A$  la constante del comercio. Determinan que la ley de gravedad de Newton que a medida que aumenta la distancia desde el punto de referencia, la influencia de un fenómeno particular que se origina en ese punto se dispersa y reduce, su influencia es el cuadrado de la distancia (p.19).

Por otro lado Candial y Lozano (2008) indica que la ecuación de la ley de gravedad implica incorporar logaritmos naturales para obtener la relación lineal entre las exportaciones, la distancia y dimensión de los países (p.13)

Se expresa de la siguiente manera:

$$\log(F_{ijt}) = a_0 + a_1 \log(M_{it}) + a_2 \log(M_{jt}) + a_3 \log(D_{ij}) \dots \dots \text{Formula 4}$$

En esta ecuación se incluyó una serie de variables en la cual recogen efectos demográficos y socio – culturales, de alguna manera representan el tamaño del mercado y adicional dos variables ficticias para tener en cuenta la existencia del idioma y frontera común entre países.

## **2.19. Modelo Gravitacional Anderson**

Los primeros pioneros en el modelo de gravedad según Cafiero (2005 citado por Albornoz y Tonon, 2020) señala que “La ecuación de gravedad puede ser derivada de las propiedades de los modelos de gasto en un contexto de bienes diferenciados, usando el denominado supuesto de Arminton (1969), donde productos se distinguen por su país de origen” (p.21).

Anderson (1979 citado en Fuentes, Díaz, & Martínez, 2003), muestra que el modelo de gravedad puede ser derivado de las ecuaciones de gasto compartido al suponer que los bienes pueden ser distinguidos por el lugar de producción, señala que el modelo incluye medidas de distancia en las ecuaciones bilaterales (p.174).

Según Anderson (2010 citado en López y Muñoz, 2008, p.804), el modelo de gravedad es una de las herramientas empíricas más útiles para explicar el comercio de bienes y servicios, los factores de producción pues se requieren que se aplique en cualquier nivel para analizar el comercio de todos los productos, o específicamente para uno de los commodities ellos por otro lado, también se debe enfatizar la capacidad del modelo para determinar el impacto de los instrumentos de política comercial dentro del comercio (p.804).

## **2.20. Desarrollo económico**

El desarrollo económico citado por Aguilar (2018) indica que es el resultado de un trabajo continuado y sostenible para obtener más producción y con ello alcanzar un mayor bienestar. En otras palabras, ese propósito está encaminado a disminuir los niveles de pobreza y a erradicar la miseria. Si se aspira al desarrollo económico, deben existir instituciones políticas, económicas y sociales adecuadas, estables y confiables. Debe existir un gobierno organizado y eficaz, capaz de elaborar planes de desarrollo y cumplirlos. Debe contarse con una moneda sana y un sistema financiero eficiente y confiable. Los países necesitan establecimientos educativos suficientes para instruir y capacitar a toda su población y también son necesarios los hospitales y clínicas, las

bibliotecas, los museos y las salas de conciertos. Toda la población debe tener las oportunidades y los medios para estudiar, investigar y capacitarse progresivamente (p. 13).

### **2.21. Finanzas internacionales**

Sostiene Córdoba (2015), las finanzas internacionales describen los aspectos tanto monetarios y el constante movimiento de dinero de todo el mundo por medio de inversiones, cambio de divisas, los índices bursátiles que se manejan en las diferentes casas de bolsa del mundo y las inversiones que realizan las empresas. A diario en el mundo se llevan a cabo operaciones de aspectos monetarios de la economía internacional, como el proceso de ajuste a los desequilibrios en la balanza de pagos o los tipos de cambio de divisas que determinan las condiciones de paridad (p. 13).

### **2.22. Exportación**

Castro (2008) hace referencia en un punto importante la cual nos indica que:

“La exportación es la salida de un producto o servicio de un determinado país a otro, atravesando las diferentes fronteras o mares que separan las naciones” (p. 109).

En este punto Ortega (2010), nos indica que

“la exportación es una parte vital e integrada en la estrategia empresarial, para la cuál será necesario realizar una significativa inversión, no sólo en términos de financiación sino también en tiempo y recursos humanos” (p. 12).

**Tabla 1.**

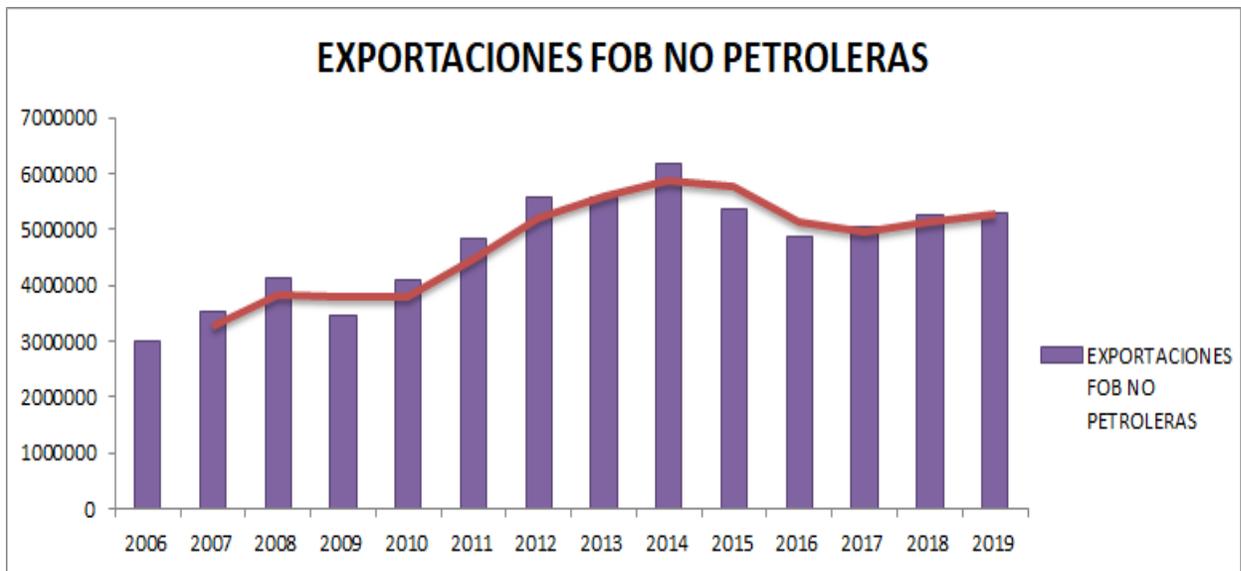

***Exportaciones FOB no Petroleras***

### 2.23. Idioma

Para Ávila (2017) citado por Yaselga y Aguirre en (2018), nos indica que el idioma y los acuerdos comerciales son un lenguaje común que induce al crecimiento de un mayor nivel de intercambio comercial entre Ecuador y los demás países, puesto que si dos países comparten el mismo idioma su relación comercial es más fuerte (p. 160).

### 2.24. Superficie

Según Acosta, Calfat y Flores (2006), expresa que según la ubicación geográfica mientras más extensa su superficie el PIB se expande (p. 47).

### 2.25. Arancel

Para Cancino (2016, p.4) los aranceles “son barreras comerciales a productos y/o una carga tributaria en forma de impuesto que se aplica a las exportaciones e importaciones de mercancías. La OMC establece lineamientos para evitar que se conviertan en obstáculos para el comercio”.

## 2.26. Inversión

Para Andrade (2011, p.46), la inversión “es el acto mediante el cual se adquieren ciertos bienes con el ánimo de obtener ingresos a lo largo del tiempo, se refiere al empleo de un capital en algún tipo de actividad o negocio con el objetivo de incrementarlo”.

Por lo tanto, se clasifican según Viñan, Puente, Ávalos, Y Córdova, (2018)

“En inversiones fijas, capital de trabajo e intangibles tomando en cuenta que los activos fijos son las inversiones fijas, el capital de trabajo se referencia al activo circulante para realizar los proyectos, existen tres características para satisfacer las necesidades de una inversión el riesgo, la rentabilidad y la liquidez” (p.51).

## 2.27. Producto Interno Bruto (PIB)

Para Baldeón (2012) el Producto Interno Bruto (PIB) “es el valor de mercado total de todos los bienes y servicios, de uso final, producidos en un país en un periodo determinado de tiempo el cual generalmente es de un trimestre o un año” (p.32).

Observaremos que en el año 2019 el PIB del Ecuador cerró en USD 107.436 millones en términos corrientes (BCE, 2019).

**Tabla 2.**

*Datos del PIB 2006-2019*

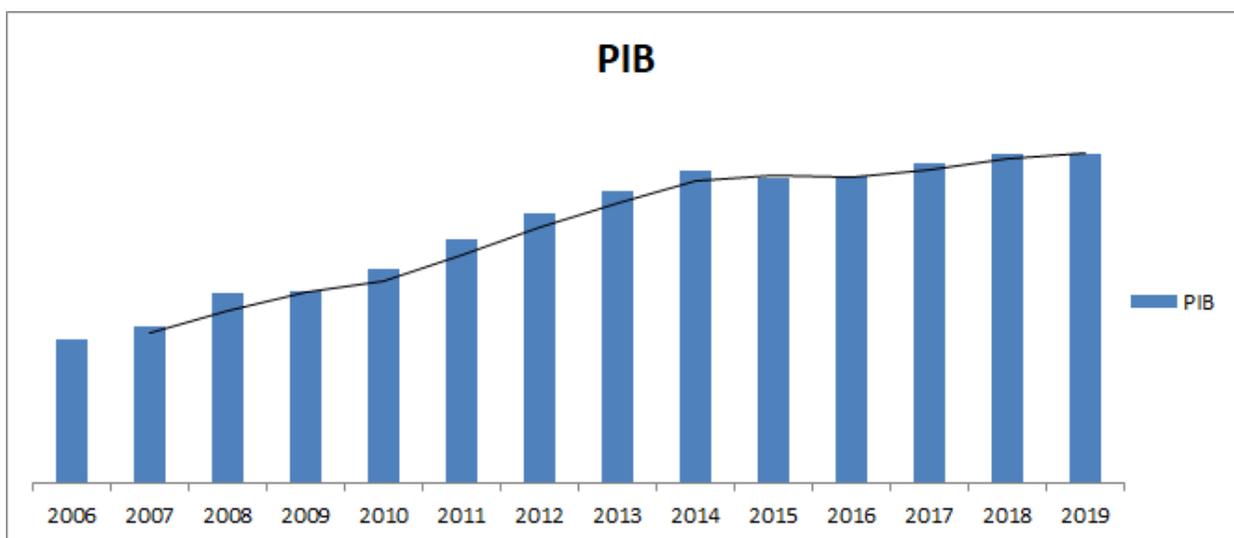

| Años | Millones de Dólares |
|------|---------------------|
| 2006 | \$ 46,802.04        |
| 2007 | \$ 51,007.78        |
| 2008 | \$ 61,762.64        |
| 2009 | \$ 62,519.69        |

## 2.26. Balanza Comercial

Según Makiw (2014) indica que la balanza comercial mide la diferencia entre las exportaciones de un país y sus importaciones con el resto del mundo pues estas forman constituyen la balanza de pagos de cada país. También llevan consigo las exportaciones e importaciones de bienes de un determinado tiempo, por su parte se deja de lado la prestación de servicios e inversiones o movimientos de recursos financieros (p. 223).

Podremos observar la balanza comercial no petroleras del Ecuador con la Unión Europea con una variación de entre el 2019 al 2020 de un 112% como podremos ver en el cuadro que fue recopilado de un informe del banco central del Ecuador (BCE).

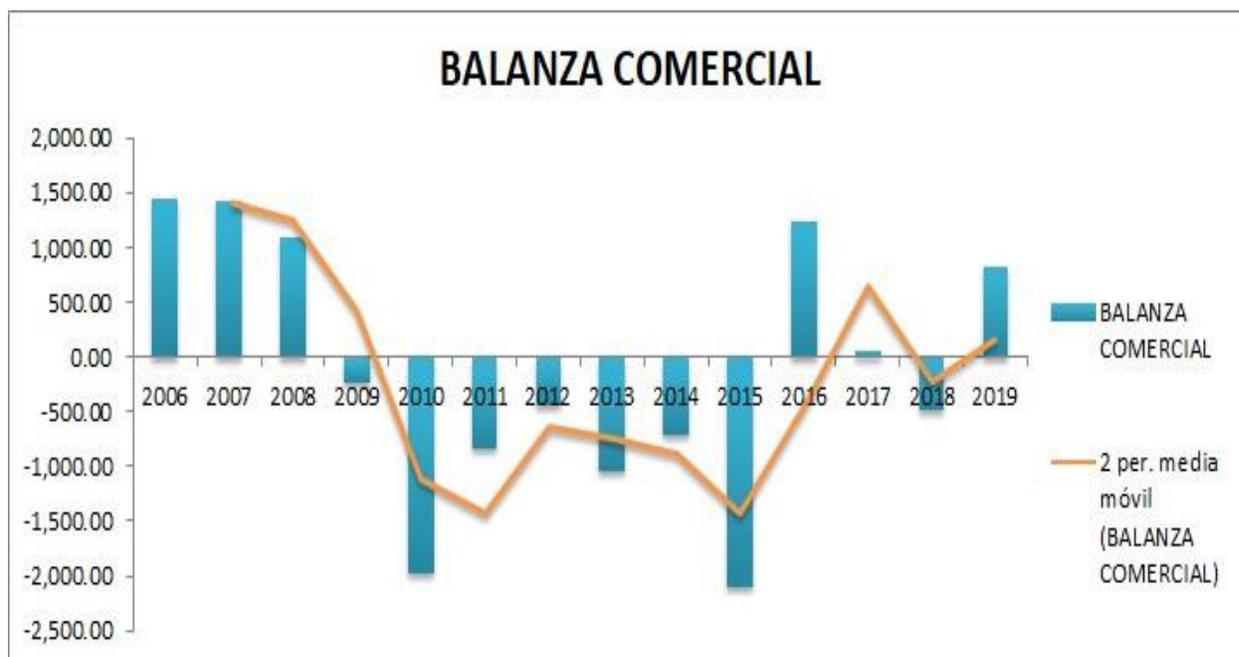

**Tabla 3.**

*Datos de la Balanza comercial 2006-2019*

| Años | Millones Dólares |
|------|------------------|
| 2006 | 1,448.79         |
| 2007 | 1,414.20         |
| 2008 | 1,081.02         |
| 2009 | -233.85          |
| 2010 | -1,978.73        |
| 2011 | -829.50          |
| 2012 | -440.61          |
| 2013 | -1,040.99        |
| 2014 | -712.49          |
| 2015 | -2,104.0         |
| 2016 | 1,231.3          |
| 2017 | 59.2             |

|      |        |

## 2.27. Política comercial

Gonzabay (2017), indica que las políticas comerciales son medidas que emplean los gobiernos de turno para ajustar los flujos comerciales que tiene un país con los demás países, para así llegar a determinar el nivel de comunicación entre productores y consumidores nacionales respecto a los precios mundiales (p. 23).

Para Ecuador según Poveda, Suraty, y Mackay (2018, p.3), comentan acerca de las medidas que los gobiernos están dispuestos a exigir; importaciones cumpliendo con los requisitos técnicos declarados como garantía de calidad, trámites aduaneros, arancel adicional ad-valorem, dumping, comparación en el precio de producto similar, barreras proteccionistas, según Paguay (2016, p.14)

se aplicará siempre y cuando exista un daño grave o amenaza de daño grave causado por ese aumento; también se aplicará un régimen de la nación más favorecida.

**Tabla 4.**

*Políticas Comerciales*

| Medidas  | Barreras   |
|--|--|
| <b>Sanitarias,</b><br><b>Fitosanitarias</b><br><b>Obstáculos técnicos al</b><br><b>Comercio</b>                    | Regulaciones de salud, sanidad, estándares de calidad, regulaciones y de seguridad e industria, regulaciones de empaque y etiquetado, incluidas las marcas registradas. Regulaciones de publicidad y medios. |
| <b>Aduana, valoración,</b><br><b>facilitación, inspección</b><br><b>(administrativas o</b><br><b>burocráticas)</b> | Medidas que se aplican tramites que encaren y se retrasan las mercancías donde se utilizan barreras de avalúo, clasificación y despacho aduanero.  |
| <b>Defensa Comercial</b>   | Adopta un arancel adicional o un equivalente arancelario.  |
| <b>Antidumping</b>   | Precio de exportación es menor considerado dumpig que el precio cuando se inició operación del producto destinado al consumo del país exportador.  |
| <b>Salvaguardia</b>  | Medidas de protección para frenar importaciones de un país para la cual salvaguardar la producción interna.  |

*Notas: Elaboración Propia citada de (Poveda, Suraty, & Mackay, 2018)*

### **2.28. Acuerdos comerciales multipartes**

Según Aguirre (2015), indica que el Acuerdo Comercial Multipartes trata sobre varios asuntos comerciales económicos el primer inversor de la región de América Latina y el Caribe (ALC) desde 1990 ha sido la Unión Europea (UE) comenta García, (2016) representado un gran interés para el comercio en la región generando un crecimiento económico con los países que tienen este acuerdo, siendo una estrategia europea reforzar los vínculos con países terceros a la cooperación de desarrollo donde se enmarca como la primera generación de acuerdos comerciales resultado esto un motor para el desarrollo construyendo de carácter asimétrico y unilateral una preferencia en reducción de los países en desarrollo de aranceles para un numero variable de productos de exportación (p.4).

### **2.29. Distancia Geográfica**

Según Ferro, (2020), esta variable es medida en millas e indica la distancia que existe entre el país de origen y su destino para que así se lleven a cabo las exportaciones. La distancia geográfica está directamente relacionada con los costes de transporte los cuales pueden presentarse como la mayor barrera no arancelaria para las exportaciones, debido a su efecto directo sobre el periodo de las mimas (p.2).

### **2.30. Globalización**

Para Comín (Galindo, 2019) la globalización es “un proceso fundamentalmente económico que consiste en la creciente integración de las distintas economías nacionales en un único mercado capitalista mundial” (p.39).

### **2.31. Unión Europea:**

Según Quistanchala (2014) argumenta que:

“La Unión Europea es un bloque político-económico que incluye a 28 países del continente europeo, entre sus objetivos principales es velar por el crecimiento y estabilidad de sus miembros; así como también por el medio ambiente donde estos se desarrollan, la cual desde su fundación en 1958 como Comunidad Económica Europea (CEE) hasta ahora, ha ayudado a elevar el nivel de vida de sus habitantes, logrando un mercado interno de libre comercio gracias a la supresión de barreras arancelarias y no arancelarias y la creación de una única moneda como el Euro, esto ha hecho que la Unión Europea se convierta en un bloque atractivo a nivel mundial, el cual brinda oportunidades como la generación de empleo y crecimiento de la economía de los países que buscan tener un mayor acceso a este mercado” (p. 11).

### **2.32. Modelo económico**

Según Díaz (1999), un modelo económico es una representación simplificada de algún aspecto de la realidad económica

En la cual se pretende estudiar. Como la economía se ocupa del análisis de las decisiones individuales, los economistas construyen modelos que describen el comportamiento de las personas, las empresas, países, etc., pues se lo utilizan para analizar los grandes problemas económicos (p. 38).

## **Marco Legal**

### **2.33. Acuerdo Comercial Multipartes entre Ecuador y la Unión Europea**

Según el Protocolo de Adhesión del acuerdo multipartes (2018), indica lo siguiente:

“Con la firma del Acuerdo Comercial Multipartes se logró obtener un marco más consolidado para Ecuador, dando como resultado el fortalecimiento del comercio y las inversiones entre ambas partes. Con este acuerdo la entrada al mercado de comercialización de bienes, servicios, compras públicas e inversiones mejorara la liberalización total o parcial para los aranceles impuestos”.

Por consiguiente, Ecuador se vincula al Protocolo de Adhesión para formar parte de dicho acuerdo, dentro del cual se menciona la inserción de las modificaciones que forman parte del nexo comercial entre la Unión Europea y sus países miembros. Este Acuerdo Comercial se concluyó con éxito el 17 de Julio del 2014 siendo aprobado por el Comité de Comercio y entrando en vigencia el 1 de enero de 2017, de esta manera Ecuador, como país andino, ocupa el tercer lugar en este convenio comercial donde constan Colombia y Perú.

Dentro del Protocolo de Adhesión se encuentran 14 Títulos y 337 Artículos, de los cuales nos enfocaremos con mayor precisión en aquellos que se ajusten a nuestro tema de investigación. A continuación, se hace mención a los siguientes:

En el Art.1 destaca al respeto como principio general que constituye el acuerdo siendo un elemento esencial de principios democráticos y derechos humanos.

El Art.2 afirma que la proliferación de armas de destrucción masiva y sus vectores, representan una de las más graves amenazas a la estabilidad y a la seguridad internacional, como solución las Partes llegan a un acuerdo de cooperación y contribución para contrarrestar actos violentos que generan malestar en ambas partes.

En el capítulo 2 de las disposiciones generales, según el Art. 3 establece una zona de libre comercio para ambas partes de conformidad con el art. XXIV del Acuerdo General sobre Aranceles Aduaneros y Comercio (GATT) de 1994 y el art. V del Acuerdo General sobre el Comercio de Servicios (AGCS).

Del mismo capítulo, en el Artículo 4 se mencionan los objetivos:

a) La liberalización progresiva y gradual del comercio de mercancías, de conformidad con lo dispuesto en el artículo XXIV del GATT de 1994;

b) La facilitación del comercio de mercancías mediante, en particular, la aplicación de las disposiciones acordadas en materia de aduanas y facilitación del comercio, normas, reglamentos técnicos y procedimientos de evaluación de la conformidad y medidas sanitarias y fitosanitarias;

c) La liberalización progresiva del comercio de servicios, de conformidad con el artículo V del AGCS; d) El desarrollo de un clima conducente a un creciente flujo de inversiones y en particular, la mejora de las condiciones de establecimiento entre las Partes en virtud del principio de no discriminación; e) Facilitar el comercio y la inversión entre las Partes mediante la liberalización de los pagos corrientes y los movimientos de capital relacionados con la inversión directa;

f) La apertura efectiva y recíproca de los mercados de contratación pública de las Partes;

g) La protección adecuada y efectiva de los derechos de propiedad intelectual, de conformidad con las normas internacionales que estén en vigor entre las Partes, de manera que se asegure el equilibrio entre los derechos de los titulares de derechos de propiedad intelectual y el interés público;

h) El desarrollo de las actividades económicas, en particular lo relativo a las relaciones entre las Partes, de conformidad con el principio de la libre competencia.

En el Art. 7 se menciona el tema de las relaciones bilaterales comerciales y económicas que se han cubierto en el Acuerdo, tomando en cuenta los derechos y obligaciones establecidos entre ambas partes.

Y por último en el Título. 3 del Comercio de Mercancías tomado del Cap. 1 Sección 1 Art. 17 indica que las partes liberalizaran su comercio de mercancías de manera gradual, a lo largo de un periodo transitorio que empieza desde la vigencia del Acuerdo, de conformidad con las disposiciones contenidas dentro de este y con el artículo XXIV del GATT de 1994.

### **Acceso al Mercado para el Comercio de Servicios**

#### **Lista de Compromisos de Establecimiento por parte de la Unión Europea**

Según el anexo IX de la sección B por parte de la Unión Europea (2016), indica cuales son las abreviaturas de los países que se mencionan a continuación: AT- Austria, BE- Bélgica, BG – Bulgaria, CY – Chipre, CZ - República Checa, DE – Alemania, DK – Dinamarca, ES - España, EE – Estonia, FI – Finlandia, FR – Francia, EL – Grecia, HR – Croacia, HU - Hungría, IE – Irlanda, IT – Italia, LV – Letonia, LT – Lituania.

También se enlistan los compromisos que figuran a continuación, puestos indican las actividades económicas liberalizadas en virtud del artículo 114 del presente Acuerdo y, mediante reservas, las limitaciones de acceso a los mercados y al trato nacional aplicables a establecimientos e inversores de los Países Andinos signatarios en esas actividades. Las listas constan de los siguientes aspectos:

a) una primera columna indica el sector o subsector en que la Parte asume el compromiso y el ámbito de aplicación de la liberalización a que se aplican las reservas; y

b) una segunda columna donde se describen las reservas aplicables.

Cuando la columna a que se hace referencia en el subpárrafo (b) solo incluya reservas específicas para Estados Miembros de la Unión Europea determinados, los

Estados Miembros de la Unión Europea no mencionados asumen compromisos en el sector en cuestión sin ningún tipo de reserva. Los sectores o subsectores no mencionados en la lista que figura a continuación no están comprometidos.

2. Para identificar los distintos sectores y subsectores:

a) por "CIIU rev 3.1" se entiende la Clasificación Industrial Internacional Uniforme de todas las actividades económicas según la definición de la Oficina de Estadística de las Naciones Unidas, Informes estadísticos, Serie M, n° 4, CIIU rev 3.1, 2002;

b) por "CCP" se entiende la Clasificación Central de Productos según la definición de la Oficina de Estadística de las Naciones Unidas, Informes estadísticos, Serie M, n° 77, CCP prov, 1991;

c) por "CCP ver. 1.0" se entiende la Clasificación Central de Productos según la definición de la Oficina de Estadística de las Naciones Unidas, Informes estadísticos, Serie M, n° 77, CCP ver 1.0, 1998.

3. La lista que figura a continuación no podrá incluir medidas relativas a los requisitos y procedimientos de cualificación, las normas técnicas y los requisitos y procedimientos de autorización cuando no constituyan una limitación del acceso a los mercados o del trato nacional en el sentido de los artículos 112 y 113 del presente Acuerdo. Dichas medidas (ej., la necesidad de obtener una autorización, las obligaciones de servicio universal, la necesidad de obtener el reconocimiento de las cualificaciones en sectores regulados, la necesidad de superar exámenes específicos, incluidos los exámenes de idiomas, el requisito no discriminatorio de que determinadas actividades no pueden emprenderse en zonas de protección del medio ambiente o de interés histórico o artístico particular) son de aplicación en cualquier caso a los inversionistas de los Países Andinos signatarios, incluso en caso de que no aparezcan enumeradas.

4. De conformidad con el artículo 107, párrafo 3, del presente Acuerdo, la lista que figura a continuación no incluye medidas relativas a las subvenciones otorgadas por las Partes.

5. De conformidad con el artículo 112 del presente Acuerdo, en la lista que figura a continuación no se incluyen los requisitos no discriminatorios relativos a los tipos de forma jurídica.

6. Los derechos y obligaciones que emanan de la presente lista de compromisos no tendrán eficacia directa y, por consiguiente, no conferirán derechos directamente a las personas físicas ni jurídicas.

### **Lista de Compromisos de Establecimiento por parte de Ecuador**

Según el Anexo X de la Sección D por parte de los compromisos de Ecuador (2016), indica lo siguiente: La presente lista de compromisos es acorde con las disposiciones constitucionales y legales que regulan el ámbito de Establecimiento en Ecuador. En la elaboración de la presente oferta, se ha considerado la Clasificación Industrial Internacional Uniforme para las Actividades Económicas la Oficina de Estadísticas de las Naciones Unidas, Informes Estadísticos, Serie M, No. 4, ISIC revisada, versión 3.1, 2002, así como la Clasificación Central de Productos de la Oficina de Estadísticas de las Naciones Unidas, Informes Estadísticos, Serie M, No. 77, provisional, 1991.

Para propósitos metodológicos de revisión y análisis: No se realiza ningún tipo de compromisos en los sectores o subsectores de actividades económicas que no se incorporan en el listado En los sectores económicos sobre los que se mantienen o incorporar nuevos compromisos aparecen las modificaciones en la columna izquierda denominada "Sector o subsector".

Las reservas, condiciones y salvedades relativas a las disciplinas de acceso a mercado y trato nacional, sobre los compromisos mantenidos o incorpora dos aparecen en la columna derecha denominada "Descripción de las reservas". Para complementar el listado, la misma columna derecha incluye las observaciones que se estiman necesarias sobre el compromiso o reserva incorporado o mantenido. Los compromisos en sectores o subsectores específicos se someten a las

reservas y limitaciones horizontales incorporadas en la primera sección, los cuales se aplican de forma transversal e irrestricta a todos los sectores, salvo que se especifique lo contrario. Los compromisos no incluyen medidas relativas a requisitos, licencias o reconocimientos, procedimientos o trámites necesarios para el ejercicio o desarrollo de una actividad económica, que se aplican aun cuando no estén listados, salvo que se presenten como limitaciones a las disciplinas de acceso a mercado y trato nacional. Las reservas, condiciones y salvedades incluidas en el listado adjunto no se aplicarán, en la medida de que presentaren inconsistencias, a los subsectores y modos comprometidos por el Ecuador en la Lista de Compromisos Específicos asumidos para su adhesión a la Organización Mundial de Comercio –OMC en 1996 y que se encuentran refundidos en el documento S/DCS/W/ECU de 24 de enero de 2003, realizado a partir de los textos originales y modificaciones de los documentos GATS/SC/98/Suppl.1 y GATS/SC/98/Suppl.2, del Acuerdo General sobre Comercio de Servicios (AGCS) de la OMC. En ese sentido, dichas reservas, condiciones y salvedades serán aplicables y exigibles para los nuevos sectores y/o modos de suministro consignados en el listado adjunto.

De acuerdo con las disposiciones incluidas en el artículo 107, párrafo 3, referidos al ámbito de cobertura de las disciplinas en el Título de Comercio de Servicios, Establecimiento y Comercio Electrónico, no se enlistan medidas relacionadas con subsidios y subvenciones que se adopte o mantengan por parte del Estado ecuatoriano. De igual forma, con fundamento en el artículo 107, párrafo 5, del Título de Comercio de Servicios, Establecimiento y Comercio Electrónico, Ecuador se reserva el derecho de establecer, mantener y ejercer plenamente su legislación nacional con el fin de alcanzar objetivos legítimos de política en áreas tales como la protección de grupos vulnerables, protección a los consumidores, salud y medio ambiente, entre otros. De acuerdo con el artículo 107, párrafo 4, del Título de Establecimiento, de Comercio de Servicios, Establecimiento y Comercio Electrónico, esta oferta no incluye los servicios suministrados en ejercicio de facultades gubernamentales. Los derechos y obligaciones que se desprendan de este

listado de compromisos no son autoejecutables en su aplicación y efecto, y por tanto, no confieren derechos exigibles directamente para personas naturales o jurídicas.

## Capítulo III

### 3.1. Metodología de la investigación

En esta sección de la investigación se va a profundizar en diferentes tipos de métodos y técnicas de investigación donde bases teóricas tendrán como objetivo contribuir al estudio.

### 3.2. Método

El método que utilizaremos es deductivo ya que es de razonamiento y se toma en cuenta la forma en cómo se definen los conceptos lo que consiste en tomar conclusiones generales para tomar explicaciones particulares lo cual “el método se inicia con el análisis de los postulados, teoremas, leyes, principios, de aplicación universal y de comprobada validez para aplicarlos a soluciones o hechos particulares” (Bernal, 2010).

Por lo cual se basa en hipótesis preestablecidas las cuales miden las variables como el análisis estadístico resulta fundamental para lograr los objetivos de conocimiento como lo señala (Hernández, Fernández, & Baptista, 2010).

### 3.3. Enfoque

En el método estadístico se aplicarán datos numéricos para el uso de técnicas econométricas y poder medir así la relación de las variables. En el estudio del enfoque cuantitativo representa un conjunto de procesos secuencial probatorio por lo que cuantifica y procesa los datos en el análisis del acuerdo multipartes de la unión europea.

El enfoque cuantitativo (que representa, como dijimos, un conjunto de procesos) es secuencial y probatorio. Cada etapa precede a la siguiente y no podemos “brincar o eludir” pasos,<sup>3</sup> el orden es riguroso, aunque, desde luego, podemos redefinir alguna fase. Parte de una idea, que va acotándose y, una vez delimitada, se derivan objetivos y preguntas de investigación, se revisa la literatura y se construye un marco o una perspectiva teórica (Hernandez Sampieri, Fernandez, & Pilar Baptista, 2010)

### 3.4. Datos de Panel

Según Gujarati & Porter (2010), nos indica que los datos de panel se refieren a individuos, empresa, estado, países, etc. A lo largo del tiempo, lo más seguro es la presencia de heterogeneidad en estas unidades. Las técnicas de estimación de datos de panel toman en cuenta de manera explícita la heterogeneidad en estas unidades. Las técnicas de estimación de datos de panel toman en cuenta de manera explícita tal heterogeneidad, al permitir la existencia de variables específicas por sujeto (p. 592).

Esto quiere decir que Mayorga & Muñoz (2000), hacen referencia que los datos de panel detectan y miden los efectos que no se logran observar en los datos de corte transversal o los de serie de tiempo, combinando ambos tipos de datos como “dimensión temporal y estructural, siendo uno de los objetivos que captura la heterogeneidad no observable, ya sea entre los agentes económicos o de estudio así como también en el tiempo, dado que esta heterogeneidad no se puede detectar ni con estudios de series de tiempo ni con los de corte trasversal” (p. 3).

Por otro lado, Ruiz (2016), determinan que los datos de panel permiten estudiar modelos de comportamiento más complejos, también pueden definirse como observaciones de un conjunto de variables de datos sobre un grupo de unidades transversales, clasificándose en aquellos como efectos fijos, efectos aleatorios y agrupados (p. 12-17).

Para Arellano (1991), se habla de datos de panel cuando:

“Tenemos observaciones repetidas a lo largo del tiempo para una muestra de las unidades individuales. Se puede decir que para una variable  $y_{it}$  tenemos  $i=1\dots N$  individuos observados a lo largo de  $t=1\dots T$  periodos de tiempo en la que  $i$  puede referirse a países o regiones, industrias entre otros” (p. 3).

Según Baronio & Vianco, (2014), la técnica de datos de panel permite:

“Disponer de mayor numero de observaciones (n x T) incrementado los grados de libertad reduciendo la colinealidad entre las variables explicativas y, en última instancia mejorando la eficiencia de las estimaciones econométricas” (p. 8).

La especificación general según Mayorga & Muñoz (2000), de un modelo de regresión con datos de panel es la siguiente:

$$Y_{it} = \alpha_{it} + X_{it}\beta + U_{it} \quad \text{Formula 5}$$

Con  $i = 1, \dots, N$ ;  $t = 1, \dots, T$ .

Donde  $i$  se refiere al individuo o a la unidad de estudio (corte transversal),  $t$  a la dimensión en el tiempo,  $\alpha$  es un vector de intercepto de  $n$  parámetros,  $\beta$  es un vector de  $K$  parámetros y  $X_{it}$  es la  $i$ -ésima observación al momento  $t$  para las  $K$  variables explícitas. En este caso la muestra total de las observaciones en el modelo vendría dado por  $N \cdot T$  (p. 3).

Para Gujarati & Porter (2010), menciona que existen varios metodos para estimar los modelos de regresion lineal de panel, existen modelos como los efectos fijos con estimadores de mínimos cuadrados con variables dicotomas, efectos aleatorios y los efectos agrupados (p. 605).

### **3.5. Modelo de Datos de panel**

En esta sección veremos los diferentes métodos en donde explicaran los diferentes efectos o fenómenos observados a través de una serie de variables que se tratan mediante regresiones lineales explicando sus comportamientos de las mismas

#### **3.5.1. Efectos Fijos**

Según Román (2017), en este modelo tenemos “ $N$  termino independiente que recogen la diferencias entre los distintos individuos y que se conoce como individuos y que se conocen como efectos fijos individuales, la variación de los efectos fijos individuales proviene de las variables omitidas que varían entre los distintos individuos, pero no con el tiempo” (p. 10.)

Por lo tanto, para Labra & Torrecillas (2014), se efectúa un trato a los efectos fijos de emplear al estimador intragrupo (within), el cual asumirá que el efecto individual está correlacionado con las variables explicativas, en la cual, dicho supuesto relaja la condición impuesta por el estimador de efectos aleatorios, tratando el efecto individual separadamente del término de error representado como la siguiente ecuación matemática (p. 16).

$$\text{corr}(a_i, x) \neq 0 \quad \text{Formula 6}$$

Para Mayorga & Muñoz (2000), indican que afecta al modelo por igual a las unidades de corte transversal las variables explicativas y que estas se diferencian por características propias de cada una de ellas, medidas por medio del intercepto. “Es por ello que los N intercepto se asocian con variables dummy con coeficientes específicos para cada unidad, los cuales se deben estimar. Para la i-ésima unidad de corte transversal, la relación es la siguiente” modelo representado como:

$$Y_i = i a_i + \beta x_i + \mu_i \quad \text{Formula 7}$$

Donde el subíndice indica que i representa a un vector de columna de unos. Debe hacerse notar que en este modelo se presenta una pérdida importante de grados de libertad, evitando así una sobre estimación del parámetro  $\beta$ , lo que ocurre cuando se aplica el estimador de efectos aleatorios (p. 8).

### **3.5.2. Efectos Agrupados**

Según Román (2017), este modelo aclara que se ignora la estructura de panel de los datos y puede incumplir la hipótesis de no autocorrelación entre las perturbaciones, además, podríamos estar interesados en determinar si estimamos un modelo agregado o T modelos de series temporales, si las perturbaciones cumplen las hipótesis básicas (p. 8).

Para Gujarati & Porter (2010), es un modelo de mínimos cuadros agrupados que tan solo se agrupa a 90 observaciones y se estima una gran regresión, sin atender la naturaleza de corte transversal y de series de tiempo de los datos (p. 593).

### 3.5.3. Efectos Aleatorios

Según Mayorga & Muñoz (2000), Se considera que los efectos individuales no son independientes entre sí, sino que están distribuidos aleatoriamente alrededor de un valor dado, en un análisis de regresión es muy común asumir un gran número de factores que afectan el valor de las variables dependientes pero que no han sido incluidas como variables independientes del modelo por la perturbación aleatoria la cual se expresa con la siguiente ecuación.

$$Y_{it} = (\alpha + \mu_i) + \beta X_i + \varepsilon_{it} \quad \text{Formula 8}$$

Donde:

$\mu$  representa perturbación aleatoria que distingue el efecto de cada individuo en el panel, que para su efecto de su estimación se agrupan componentes estocásticos. (p. 8).

También para Labra & Torrecillas (2014), se trata de emplear el método generalizado de momentos, esto quiere decir, una extensión más eficiente que los de mínimos cuadrados ordinarios asumiendo la condición de los efectos individuales la cual o están correlacionados con las variables explicativas (p. 16).

El modelo es:

$$\text{corr}(\alpha_i, X) = 0 \quad \text{Formula 9}$$

Siendo,

- $\alpha_i$ = Efectos individuales
- $X$  = Variables explicativas

Quedando los efectos individuales en la que se suman al termino de error quedando un modelo definido como:

$$Y_{it} = \beta X_{it} + (a + \mu_{it}) \quad \text{Formula 10}$$

### 3.6. Prueba Hausman

Según Mayorga & Muñoz (2000), esta prueba permite “determinar qué modelo es el más adecuado para el panel de datos que se está analizando, si el de efectos fijos o de efectos aleatorios. Utiliza para ello una prueba Chi-cuadrado con la hipótesis nula de que el modelo de efectos aleatorios es el que mejor explica la relación de la variable dependiente con las explicativas, y por tanto se tiene la hipótesis alternativa de que el mejor método que se ajusta es el de efectos fijos” (p. 12).

### 3.7. Prueba de breusch pagan multiplicadores Lagrangianos

Para Montero (2011), nos indica que:

“La prueba consiste en realizar la regresión auxiliar  $indep_{it} = dep_{it} + u_i + e_{it}$  donde la hipótesis nula es  $VAR(u_i) = 0$  con una  $\chi^2$  de contraste, si el valor del test es bajo (p-Valor mayor a 0.95) la hipótesis nula se confirma y es mejor mínimos cuadrados ordinario, si el valor del test es alto (p-valor menor de 0.05) la hipótesis nula se rechaza y es mejor elegir un modelo anidado”(p. 4).

### 3.8. Prueba de autocorrelación serial

Para Gujarati & Porter (2010), se define como:

“La correlación entre miembros de series de observaciones ordenadas en el tiempo cómo en datos de series de tiempo o en el espacio como en datos de corte transversal, por lo que en el contexto de regresión el modelo clásico de regresión lean supone que no existe tal autocorrelación en las perturbaciones  $\mu_i$ , definiéndose como autocorrelación serial cuando existe correlación entre dos series de tiempo como  $u_1, u_2, \dots, u_{10}$  y  $v_1, v_2, \dots, v_{10}$  donde u y v son dos series de tiempo” (p. 413).

Según Alonso (2012), hace referencia a situaciones donde las observaciones de la variable dependiente no son extraídas independientemente, es muy habitual en el caso de datos de series temporales, por lo tanto, no se presenta en el caso de datos de sección cruzada, en que las unidades que los componen son independientes entre sí.

Fernández, Vallejo y Herrero (2004), Expresan que:

“Una de las estructuras que con más frecuencia adoptan los diseños de medidas repetidas es aquella que contiene un único factor A entre sujeto “grupo” que representa una variable, el procedimiento de recogida de datos es susceptible de manifestar el efecto secuencial de dependencia serial, resultando comprometida” (p. 1).

### 3.9. Heterocedasticidad

Según Arce (2001), nos indica que la existencia de una varianza que no es constante la cual, en las perturbaciones aleatorias de un modelo econométrico, la estimación del modelo debe hacerse a partir del modelo de mínimos cuadrados generalizados, demostrando que estos estimadores son lineales, insesgados, óptimos y consistentes para la estimación de una estructura no escalar.

- Ecuación matemática

$$\beta^{MCG} = [X'\Sigma^{-1}X]^{-1} X'\Sigma^{-1}Y \quad \text{Formula 11}$$

Donde:

- “n” observaciones
- “K” variables explicativas

Se debe estimar “k” parámetros sobre las variables y “n” varianzas distintas de las perturbaciones aleatorias (p.5)

### **3.10. Tipo de investigación**

La investigación describirá los resultados de la recolección de información que fueron obtenidos de manera que obtenemos un aspecto general sobre el impacto del acuerdo multipartes con la Unión Europea.

En la presente investigación el estudio descriptivo por la cual es la base de las investigaciones correlacionales las cuales a su vez proporcionan información para llevar a cabo estudios explicativos que generan un sentido de entendimiento y son altamente estructurados (Hernández, Fernández, & Baptista, 2010).

Es de total importancia por cuanto de manera que ayudara a describir fenómenos o a especificar propiedades más relevantes por la cual medirá o evaluara procesos de los diferentes aspectos, este tipo de estudio se podrá consolidar las evaluaciones de las exportaciones a la unión europea acorde al acuerdo multipartes obtenido por Ecuador.

Por a cuál en el presente trabajo se implementará el estudio descriptivo que ayudará a especificar los problemas más relevantes evaluando los objetivos del estudio donde podremos consolidar el avance o la evolución de las exportaciones hacia la unión europea con el tratado multipartes.

Se realizo una investigación descriptiva exploratoria por lo que nos permitió entrar en profundidad en el tema por lo que nos ayudó a planear nuestra investigación “Análisis del acuerdo multipartes con la Unión Europea a través del modelo gravitacional para el Ecuador 2009 - 2019”.

### **3.11. Población y muestra**

En este punto la muestra es información secundaria por lo que se dará a conocer que se tomará para la recolección de información por medio de una base datos y recopilación de información acerca del acuerdo multipartes de la Unión Europea.

### **3.12. Fuentes de recopilación de información**

La fuente de información que vamos a utilizar es la secundaria dado que contiene información organizada, elaborada producto de análisis extracción y reorganización de documentos primarios originales.

### **3.13. Herramientas de recopilación de información**

Los datos que se analizan de la siguiente manera es información de documentos académicos verificados por lo tanto la veracidad de los resultados dependerá de la recopilación de datos que más se acercan a lo real.

### **3.14. Herramientas de análisis de información**

Las herramientas de análisis de información que utilizaremos en esta investigación para obtener el modelo econométrico es el software de acceso gratuito Rstudio. En la parte de los cuadros demostrativos y de los datos sobre la investigación, se usará Microsoft Excel. Para el análisis cualitativo de la información del trabajo de titulación, se usará Microsoft Word.

### **3.15. Limitaciones de la investigación**

En esta investigación utilizaremos información secundaria puesto que recolectamos datos de las diferentes páginas en internet ya que no se posee la suficiente financiación para entrevistar a las autoridades de los países que conforman la Unión Europea.

### **3.16. Delimitaciones**

Utilizaremos los 48 países que conforman la Unión Europea, el tratado que vamos a analizar es el del acuerdo multipartes de Ecuador con la Unión Europea empleando el periodo 2009 y 2019. Por la cual, para proceder al análisis de las herramientas del modelo gravitacional de Newton también estudiaremos las variables Exportación, PIB, Idioma, Tratado de libre comercio (TLC), FG, AM, Distancia y Superficie del Ecuador y la Unión Europea.

### 3.11. Diseño de investigación

Si bien es cierto, en econometría se utiliza de forma frecuente la herramienta de regresión lineal para correr modelos sobre algún tema de interés. Con este modelo se busca explicar la robustez de la relación que existe entre la variable dependiente y a su vez las variables independientes. La especificación del modelo viene dada por la siguiente relación:

Donde  $Y_i$  es la variable dependiente, las variables  $X$  son las variables independientes, los Betas son los parámetros a estimar y la  $u_i$  representa a los errores.

Es importante que el modelo de regresión lineal cumpla con los siguientes supuestos para que pueda ser válido:

- 1 debe de haber linealidad entre las variables
- 2 los errores de las variables que explican el modelo deben de ser independientes entre sí.
- 3 homocedasticidad
- 4 no autocorrelación
- 5 no multicolinealidad

Por otro lado, tenemos la técnica del modelo econométrico de datos de panel, modelo que utilizaremos en este diseño de investigación ya que se incluirán agentes económicos o de interés como son los países que forman parte de la Unión Europea, y el periodo en años. De esta manera combinamos datos tanto de dimensión temporal y estructural.

Con este modelo se obtendrá la heterogeneidad no observable entre agentes económicos y periodo de tiempo, haciéndolo más dinámico para este estudio.

### 3.12. Operacionalización

Las variables dependientes e independientes que se utilizaran en la investigación son las siguientes:

**Tabla 5**

**Operacionalización**

| DIMENSIÓN             | VARIABLE  | FUENTE   |
|-----------------------|---|--|
| <b>Económica</b>      | PIB Ecuador   | BM   |
| <b>Económica</b>      | PIB Unión europea, más los demás países de Europa y los países con los que Ecuador tiene mayor flujo comercial. | BM   |
|                       | Exportaciones FOB no petroleras   | PROECUADOR                                     |
| <b>Dimensión</b>      | Superficie en km  | BM   |
|                       | Distancia en km cuadrados   | GEODATOS                                       |
| <b>Variable dummy</b> | Tratados multipartes<br>0: no tiene tratado vigente<br>1: tratado vigente                                       | Sistema de Información sobre Comercio exterior |
| <b>Variable dummy</b> | Idioma  | Elaboración propia                             |

---

|                       |                                    |                    |
|-----------------------|------------------------------------|--------------------|
|                       | 0: no tiene el mismo idioma        |                    |
|                       | 1: tiene el mismo idioma           |                    |
| <b>Variable dummy</b> | Frontera Geográfica                | Elaboración propia |
|                       | 0: no comparte frontera geográfica |                    |
|                       | 1: comparte frontera geográfica    |                    |
| <b>Variable dummy</b> | Acceso al Mar                      | Elaboración propia |
|                       | 0: no tiene acceso al mar          |                    |
|                       | 1: acceso al mar                   |                    |

---

*Notas: Elaboración Propia, las Variables para la Recopilación de Datos Escogidos de Acuerdo a una Revisión de la Literatura donde Indicaban cuales Explicaban más el Modelo*

### 3.13. Hipótesis

La firma del acuerdo multipartes permitió un incremento importante del flujo comercial de Ecuador a la Unión Europea.

## 4 CAPITULO IV

### RESULTADOS

En este documento se utilizó datos de panel balanceado de tipo largo. Analizaremos un informe mediante el análisis de un conjunto de datos teniendo como variable dependiente a la exportación y a las variables independientes como Pib del Ecuador, Pib de los demás países en millones de dólares, de igual forma se utilizaron Superficie en km cuadrados, Distancia en kilómetros, también variables dicótomas como Idioma, Frontera geográfica, Acceso al mar y si tienen algún Tratado de libre comercio vigente; los datos fueron corridos a través de panel en Rstudio.

Por su parte validamos los datos de 48 países que contengan información completa para nuestro análisis de forma trimestral desde el año 2006 al 2019. A continuación se nombran a los países: Alemania, Austria, Bélgica, Bulgaria, Chipre, Croacia, Dinamarca, Eslovenia, España, Estonia, Finlandia, Francia, Grecia, Hungría, Irlanda, Italia, Letonia, Lituania, Luxemburgo, Malta, Países Bajos, Polonia, Portugal, República Checa, República Eslovaca, Rumania, Suecia, Chile, Colombia, Georgia, Islandia, Luxemburgo, Macedonia, Perú, Noruega, Rusia, Suiza, Reino Unido, Estados Unidos, Vietnam, Ucrania, México, Corea Del Sur, Japón, Argentina, Brasil, China e Irlanda.

Para Gujarati & Porter (2010), el desarrollo de esta investigación se utilizará la siguiente especificación econométrica, en la cual las betas o parámetros que se conseguirán, deberán ser interpretados como elasticidades. En esta ecuación econométrica se utilizará un modelo logaritmo-lineal, puesto que nos sirve para que los parámetros sean lineales y se comporte como cualquier otro modelo de regresión lineal, sin embargo, en este modelo, la variable regresada se expresara en términos logarítmicos (p. 159-160).

Según Yaselga & Aguirre (2018), al momento de interpretar las variables dicotómicas sobre la variable dependiente se aplica la siguiente fórmula.

$$(e^{\gamma} - 1) * 100 \quad \text{Formula 12}$$

Donde  $\gamma$  es el coeficiente obtenido en la estimación para la variable correspondiente (p. 151)

### **Función Logarítmica del modelo gravitacional**

$$\text{Ln Exp} = \text{Ln PIBe} + \text{Ln PIB} + \text{Ln SUP} + \text{Ln DIST} + \text{ID} + \text{FG} + \text{AM} + \text{TLC}$$

### **Especificación de las variables**

EXP: Exportaciones de Ecuador hacia los diferentes países estudiados

PIBe: PIB de Ecuador

PIB: PIB de los 48 países estudiados

SUP: Superficie en km cuadrados de cada uno de los países

DIST: Distancia en km de cada uno de los países

ID: Idioma

FG: Frontera Geográfica

AM: Acceso al Mar

TLC: Tratado de Libre Comercio

## MODELO DE EFECTOS AGRUPADOS

Call:

```
plm(formula = LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC, data
= pdata, model = "pooling")
```

Unbalanced Panel: n = 48, T = 32-56, N = 2632

**Tabla 6.**

---

El modelo de efectos agrupados es el más sencillo para analizar en datos de panel, pues este considera constante el término independiente en las dimensiones de espacio y tiempo. Para este modelo es usual aplicar el método mínimo cuadrado ordinario (MCO) para estimar los parámetros (coeficientes  $\alpha$  y  $\beta$ ), siempre y cuando se cumplan todos los supuestos propios de este modelo, por lo tanto, la ecuación queda expresada de la siguiente manera (Fuentes, Tarazona, Tarquino, & Villanueva, 2016):

Los resultados del modelo agrupado en datos de panel nos indican que todos los parámetros son significativos, entendiendo que el modelo tiene una buena correlación entre variables, es decir todas influyen en el modelo. La bondad de ajuste es alta, siendo del 68% y el p-value global es de <0.05, mostrando de esta manera que el modelo es significativo. También nos indica que todas las variables tienen la misma pendiente y el mismo intercepto.

## MODELO DE EFECTOS FIJOS

*Call:*

```

---

En el modelo de efectos fijos con variable dicótoma, se toma en cuenta la heterogeneidad entre los países, pues permite que cada país tenga su propio valor de intercepto, pero con pendientes constantes, este puede estar correlacionado con las variables explicativas. Se construyeron variables dicótomas para cada intercepto de cada país, de las cuales se tomaron 47 para no caer en una situación de colinealidad perfecta.

Los resultados presentaron las siguientes variables significativas: LnPibe, LnPIB, Acceso al Mar, Tratado de Libre Comercio, P15, P16, P30, P35, P36, P38, P40, 1 1, P42. Esto quiere decir que no existe diferencia entre cada uno de los países, puesto que cada intercepto es igual para cada uno de los países.

## MODELO DE EFECTOS FIJOS WITHIN

```
fijosw <- plm(LNEXP~LNPIBe+LNPIB+LNSUP+LNDIST+IDI+FG+AM+TLC, data = pdata,
model = "within")
```

Call:

```
plm(formula = LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC, data
= pdata, model = "within")
```

Unbalanced Panel: n = 48, T = 32-56, N = 2632

Tabla 8

*Coefficients:*

|        | Estimate      | Std. Error   | t-value      | Pr(> t )              |            |
|--------|---------------|--------------|--------------|-----------------------|------------|
| LNPIBe | <b>3.817</b>  | <b>0.208</b> | <b>18.35</b> | <b>&lt; 2e-16</b>     | <b>***</b> |
| LNPIB  | <b>1.612</b>  | <b>0.237</b> | <b>6.80</b>  | <b>0.000000000013</b> | <b>***</b> |
| LNSUP  | <b>-0.083</b> | <b>0.606</b> | <b>-0.14</b> | <b>0.89</b>           |            |

*Notas:* Elaboración Propia del Modelo de Efectos Fijos Within

---

Signif. codes: 0 '\*\*\*' 0.001 '\*\*' 0.01 '\*' 0.05 '.' 0.1 ' ' 1

**R-Squared:** 0.255

**Adj. R-Squared:** 0.241

**F-statistic:** 294.661 on 3 and 2581 DF, **p-value:** <2e-16

Por otro, en el modelo “*within*” no se toma en cuenta las variables dicótomas que se crearon en el modelo anterior de efectos fijos. Los resultados son los siguientes:

- El PIB de Ecuador y el PIB de los otros países resultaron significativas, mientras que la variable superficie resultó no significativa.
- Posee una bondad de ajuste muy baja del 25%
- Tiene un p-value global significativo menor a 0.05

### **Prueba F restringida**

Prueba F restringida =  $(Rnr - Rr/m) / ((1-Rnr)/n-k)$ ,  $m = n-1$  variables dummy

**H<sub>0</sub>:** Todos los coeficientes de las dummy's son cero. Efectos fijos

**H<sub>1</sub>:** Efectos agrupados

pFtest(pooling,fijos)

F test for individual effects

data: LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC

F = 36, df1 = -42, df2 = 2623, p-value = NA

Hipótesis alternativa: efectos significativos

Se realizó una prueba F restringida para decidir qué modelo es más efectivo, si el modelo de efectos agrupados o el modelo de efectos fijos. El efecto restringido, en este caso es el efecto agrupado, esto se da porque el valor de bondad de ajuste es más alto en comparación con el de

efectos fijos. El resultado de esta prueba es que se acepta la hipótesis alternativa de efectos agrupados.

### MODELO DE EFECTOS ALEATORIOS

Call:

```
plm(formula = LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC, data
= pdata, model = "random")
```

*Notas: Elaboración Propia del Modelo de Efectos Aleatorios*

---

Signif. codes: 0 ‘\*\*\*’ 0.001 ‘\*\*’ 0.01 ‘\*’ 0.05 ‘.’ 0.1 ‘ ’ 1

**R-Squared:** 0.281

**Adj. R-Squared:** 0.279

Chisq: 1029.78 on 8 DF, **p-value:** <2e-16

---

El modelo de componente de error o modelo de efectos aleatorios considera que el número de las muestras son aleatorias, independientemente del tipo de circunstancia que se encuentre. Por lo general, el modelo de componente de error es eficiente, dado que la varianza de la estimación es menor, sin embargo, no es mejor que el modelo de efectos fijos.

Los resultados del modelo de efectos aleatorios muestran lo siguiente:

- Las variables significativas son el intercepto, el PIB de Ecuador, el PIB de los demás países, el Idioma y la variable de Acceso al Mar.
- El Rcuadrado o bondad de ajuste es muy bajo, siendo del 28%.
- EL p-value global es menor al 0.05

### **PRUEBA BREUSH PAGAN DE MULTIPLICADORES LAGRANGIANOS**

**H<sub>0</sub>:** Efectos Aleatorios

**H<sub>1</sub>:** Efectos Agrupados

Lagrange Multiplier Test - (Breusch-Pagan) for unbalanced panels

data: LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC

chisq = 22433, df = 1, **p-value** <2e-16

### **Hipótesis alternativa: efectos significativos**

En esta prueba analizamos que modelo es mejor, si el efecto aleatorio o el efecto agrupado; el resultado indicó que la hipótesis alternativa es la mejor opción en este caso, es decir, los efectos agrupados. Se observa un p-value menor a 0.05.

### **PRUEBA DE HAUSMAN**

Ho: Efectos fijos

H1: Efectos aleatorios

data: LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC

chisq = 62, df = 8, p-value = 0.0000000002

### **Hipótesis alternativa: el modelo es inconsistente**

Se realizó la prueba de Hausman para decidir qué modelo es mejor, si el efecto aleatorio o el efecto fijo, por tal motivo, el resultado indica que el modelo es inconsistente. Al ser el p-value muy pequeño, se acepta la hipótesis alternativa, es decir, los efectos aleatorios.

### **PRUEBA PARA DEPENDENCIA/ INDEPENDENCIA EN SECCIÓN CRUZADA**

**H0:** Independencia de sección cruzada

**H1:** Dependencia de sección cruzada

Breusch-Pagan LM test for cross-sectional dependence in panels

data: LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC

chisq = 14977, df = 1128, **p-value** <2e-16

### **Hipótesis alternativa: Dependencia transversal**

Pesaran CD test for cross-sectional dependence in panels

data: LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC

$z = 8.2$ , **p-value** =  $3e-16$

### **Hipótesis alternativa: Dependencia transversal**

En este modelo nos encontramos con la novedad de que existe dependencia en sección cruzada, esto quiere decir que la muestra es aleatoria con respecto a los países, de acuerdo al tiempo que se ha establecido, por tal razón es tomada en cuenta en una muestra al azar. EL p-value es menor a 0.05 para ambos casos. Este modelo presentaría deficiencia.

### **PRUEBA DE AUTOCORRELACIÓN SERIAL**

**H0:** No existe correlación serial

**H1:** Si existe correlación serial

Breusch-Godfrey/Wooldridge test for serial correlation in panel models

data: LNEXP ~ LNPIBe + LNPIB + LNSUP + LNDIST + IDI + FG + AM + TLC

chisq = 1958, df = 32, **p-value** <  $2e-16$

### Hipótesis alternativa: correlación serial en errores idiosincrásicos

En esta prueba nos muestran los resultados que el p-vale es muy pequeño, rechazando la hipótesis nula y aceptando la alternativa, de esta forma nos indica que si existe correlación serial en el modelo.

### PRUEBA DE HETEROCEDASTICIDAD

**H0:** Homocedasticidad

**H1:** Heterocedasticidad

Breusch-Pagan test

data: pooling

BP = 516, df = 8, **p-value** <2e-16

Este modelo presenta problemas de heterocedasticidad, dado que rechaza la hipótesis nula, el p-value es menor a 0.05.

### DESARROLLO DE UNA MATRIZ DE COVARIANZAS ROBUSTOS PARA SUPERAR LA HETEROCEDASTICIDAD

Tabla 10

Las matrices de covarianzas robustas castigan los errores estándares de las varianzas desiguales o heterocedásticas. La matriz de varianza- covarianzas heterocedásticas o consistente con heterocedasticidad, castigan a los valores t porque se encuentran maquillados y no toman en cuenta la heterocedasticidad.

Los coeficientes se mantienen iguales, los valores t se ven favorecidos, sin embargo, en el modelo ya corregido, indica que el LNSUP, LNDIST y la variable dicótoma Tratado Libre de Comercio, dejaron de ser significativas.

## CONCLUSIONES

En la práctica, hemos incorporado a nuestro modelo variables que según documentos que han aplicado el modelo gravitacional como los trabajos de Caro, García y Torres 2015 y el documento de Emanuel Yaselga e Ilich Aguirre 2018, pues aparte de utilizar las variables antes mencionadas, decidieron incluir a sus trabajos las variables geográficas como lo son frontera y salida al mar, además de las variables idioma, superficie y tratado comerciales vigentes.

El modelo de efecto agrupados mostros mejores resultados, la variable dependiente y las variables independientes resultaron significativas, además el p-value también fue significativo, siendo menor a 0.05, por otro lado, el modelo de efectos fijos y aleatorios resultaron con variables no significativas, muy aparte de tener un p-value muy pequeño.

La elección del modelo fijo y agrupado, se dio a través de la prueba F restringida, siendo significativa la hipótesis de los efectos agrupados.

Se utilizó la prueba Breush Pagan de Multiplicadores Lagrangianos para elegir la mejor alternativa entre efectos aleatorios y efectos agrupados, dando como resultado la hipótesis alternativa, siendo así los efectos agrupados, el valor p es menor a 0.05.

La prueba de Hausman indica que la mejor alternativa de modelo, son los efectos aleatorios, presenta un valor p menor a 0.05.

El modelo presenta autocorrelación serial y heterocedasticidad, puesto que los valores p son muy pequeños, así de esta forma rechaza la hipótesis nula y acepta la hipótesis alternativa.

Al corregir la heterocedasticidad en el modelo, se visualizó que las variables LNSUP, LNDIST y la variable dicótoma Tratado Libre de Comercio no resultaron significativas.

Las exportaciones son proporcionales al PIB de Ecuador y al PIB de los demás países. De igual manera el idioma en común entre países, facilita el flujo comercial. Por su parte si ambos países

comparten frontera geográfica y tienen acceso al mar, también tendrán un flujo comercial significativo.

## RECOMENDACIONES

El presente trabajo de titulación fue realizado mediante el modelo de gravedad utilizando la prueba Breush Pagan por lo tanto a futuras investigaciones se recomienda hacer un análisis a la variable de tratados comerciales ya que tendrá más vigencia en el transcurso del tiempo para poder observar los resultados si lograron cumplir los objetivos comerciales.

Por otro lado, se recomienda tener en cuenta que las variables que no salieron significativas como distancia, superficie y los tratados de libre comercio deben ser revisadas y analizadas en otro documento, puesto que en nuestro trabajo de titulación al momento de correr el modelo de efectos agrupados estas variables salieron significativas, sin embargo, el modelo presento autocorrelación serial y heterocedasticidad por tal motivo se desarrolló una matriz de covarianzas robustas para curar la heterocedasticidad. Dando como resultado no significativas las variables antes mencionadas.

Se recomienda revisar otros documentos para analizar otras variables e incluirlas, la cual podrían tener relevancia al momento de correr el modelo, para lograr observar si son significativas y concluir si existe algún cambio sustancial en el modelo.

Es importante tener en cuenta que la variable de tratado libre comercio (TLC) no resulto significativa en el documento guía de Emanuel Yaselga e Ilich Aguirre 2018 y en nuestro análisis tampoco salió significativa, puesto que en la mayoría de países no existen TLC vigentes.

## 6 ANEXOS

### 6.1 ANEXO 1 CARTA DE APTO

Guayaquil, 28 de febrero del 2021.

Ingeniero

**Freddy Camacho Villagómez**

COORDINADOR UTE A-2020

ECONOMÍA

En su despacho.

De mis Consideraciones:

Economista **Marlon Estuardo Pacheco Bruque** Docente de la Carrera de Economía, designado TUTOR del proyecto de grado de **Jorge Josue Peñaloza Muñoz**, cúpleme informar a usted, señor Coordinador, que una vez que se han realizado las revisiones al 100% del avance del proyecto **avaló** el trabajo presentado por el estudiante, titulado **“Análisis del acuerdo multipartes con la Unión Europea a través del modelo gravitacional para el Ecuador 2006 – 2019”** por haber cumplido en mi criterio contodas las formalidades.

Este trabajo de titulación ha sido orientado al 100% de todo el proceso y se procedió a validarlo en el programa de URKUND dando como resultado un **0 % de plagio**.

Cabe indicar que el presente informe de cumplimiento del Proyecto de Titulación del semestre A-2020 a mi cargo, en la que me encuentra(o) designada (o) y aprobado por las diferentes instancias como es la Comisión Académica y el Consejo Directivo, dejo constancia que los únicos responsables del trabajo de titulación **“Análisis del acuerdo multipartes con la Unión Europea a través del modelo gravitacional para el Ecuador 2006 – 2019”** somos el Tutor (a) Econ. Marlon Estuardo Pacheco Bruque y el Sr. Jorge Josue Peñaloza Muñoz y la Srta. Ruth Stefany Rodas Chiquito. Y eximo de toda responsabilidad al coordinador de titulación y a la dirección de carrera.

La calificación final obtenida en el desarrollo del proyecto de titulación fue: **10/10 D IEZ SOBRE DIEZ**.

Atentamente,

Econ. Marlon Estuardo Pacheco Bruque.

Jorge Josue Peñaloza Muñoz y Ruth Stefany Rodas  
Chiquito

| <b>RESUMEN/ABSTRACT</b>               | <p>El objetivo principal de este trabajo es determinar si la firma del acuerdo multipartes de Ecuador con la Unión Europea, permitió un incremento en el flujo comercial entre ambos actores en el año 2006 - 2019. Considerando una muestra de 48 países con datos trimestrales, utilizaremos un modelo de datos de panel</p> |                        |     |

con sus efectos desde las teorías del modelo gravitacional para obtener estimaciones eficientes y precisas. Los resultados mostrarán la importancia de los factores económicos, comerciales y geográficos dados las variables independientes como el PIB de Ecuador y PIB de los demás países, la distancia, la superficie, el idioma y los tratados comerciales internacionales, en los flujos del comercio de Ecuador. Los resultados indican cual es la correlación que existe entre las variables, si se sujeta más al modelo de efectos agrupados, efectos fijos o efectos aleatorios. Por tal razón utilizamos Rstudio para tener un análisis más amplio acerca de nuestras variables escogidas.
